CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

HENRY C. HOWE, Meteorologist

VOL. XL PARKERSBURG, W. VA., JANUARY, 1932 NO. 1

GENERAL SUMMARY

The past month, with an average temperature of 43.4°, was by far the warmest January of State record. The previous warmest January was in 1913, when the average temperature was 40.7°. In all other previous Januarys of State record one or more stations had a temperature below zero, while the lowest temperature recorded for January, 1932, was 7°. These conditions followed an exceptionally warm December as well as a warm year. In the agricultural regions stock remained in the open practically all the time. Buds formed on fruit trees and the conditions were like spring. The precipitation was also considerably above the normal and was excessive in many sections of central counties, causing marked floods in the streams and smaller rivers. The snowfall was also by far the least of any January of State record, the average for the month being only 0.3 inch. There were 46 stations without snowfall and 76 stations that had no snow or only a trace of snow. Moderately high winds occurred in sections of the State on the 27th. The wind tore off a composition roof of a building belonging to H. T. Lawson in Mason County, causing a loss of about $100.00.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 43.4°. The departure from the normal for 45 stations having ten or more years of record was +11.2°. The temperature was above the normal until the 31st, with the possible exception of the 10th. For about ten days of that period the temperature averaged 20° above the normal and on two days nearly 30 above. A short period of moderately cold weather set in on the 30th and continued over the 31st.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 4.82 inches. The departure from the normal for 64 stations having ten or more years of record was +0.94 inch. The precipitation was greatest over the central counties and least over the northeastern counties. Most of the precipitation was received on the 1st-2d, 6-7th, 13th, 15-16th, 18th, 22d-24th, 26-27th and 29-30th. Most of the snow fell on the 1st-3d, 27th and 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 3d and 10th; Arbovale, 17th; Brandywine, 1st; Bruceton Mills, 22d and 23d; Creston, 9th; Elkins, 10th and 23d; Hinton, 14th and 23d; Horton, 10th; Huntington, 14th, 16th, 22d, 23d, and 26th; Pickens, 3d, 9th, 10th, and 16th; Richwood, 2d; Stony River Dam, 3d and 4th; Terra Alta, 8th, 9th, 10th, 22d and 23d; Wellsburg, 8th and 9th; Wheeling, 8th and 9th; Williamson, 11th and 23d,

Hail, light: Williamson, 1st; Richwood, 27th; Roanoke, 30th.

Halos, lunar: Aberdeen, 17th and 20th; Terra Alta, 19th.

Sleet Richwood and Wardensville, 1st; Richwood, 2d; Cheat Bridge, Horton and Lewisburg, 3d; Alpena, 9th; Pickens, 10th and 11th; Terra Alta, 20th; Marlinton, 26th; Parkersburg, 27th.

Thunderstorms: Parkersburg, 13th; Richwood, 27th; Roanoke, 30th.

ERRATA

Correct Monthly Climatological Data for 1931, to read:

FEBRUARY: Williamson, make greatest 24-hour precipitation 0.68 on the 13th.

MARCH: Elkins, make maximum temperature on the 22d 41°; mean maximum temperature 40.2° and monthly mean temperature 33.9°.

MAY: Gary, make number of days with 0.01 inch or more of precipitation 20.
White Sulphur Springs, make mean maximum temperature 72.7° and mean monthly temperature 59.0°.

JUNE: Wheeling, make mean minimum temperature 53.9°.

JULY: Bancroft, make lowest temperature 52° on the 7th.

AUGUST: Morgantown, make lowest temperature 51° on the 24th.

DECEMBER: Buckhannon, make mean maximum temperature 51.7°, monthly mean 42.6° and departure from normal +8.8°.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries
Reference letters. [a], [b], [c] appearing in the table indicate number of missing days: for example, [b] represents two days, etc.

HENRY C. HOWE, Meteorologist

VOL. XL PARKERSBURG, W. VA., FEBRUARY, 1932 No. 2

GENERAL SUMMARY

February was a month of superlative weather conditions. The average temperature, 41.6°, was the highest of February State record. The highest temperature recorded during the month, 86°, was also the highest of February State record. It will also be remembered that the preceding months of January and November were record warm months, and that December was also the warmest month of December State record, except in 1923. The average snowfall, 0.2 inch, was also much the least of previous February State records. The precipitation was about one-half inch above the average. Near the close of the month early peach trees were in bloom in many localities. Cattle remained in the open. Plowing and other farm work progressed rapidly.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 41.6°. The departure from the normal for 45 stations having ten or more years of record was +8.3°. The temperature was above the normal for the entire month, with the exception of five days, or the 1st, 14th, 15th, 23d and 24th. On the 10th and 11th the temperature averaged nearly 30° above the normal. The highest temperature was on the 11th and the lowest on the 1st.

PRECIPITATION

The average precipitation for the State, determined from 93 stations, was 3.22 inches. The departure from the normal for 64 stations having ten or more years of record was +0.54 inch. The precipitation was greatest over the central counties and least over the northwestern counties. The greater portion of the precipitation was received on the 2d-4th, 8th, 12th, 17th, 22d and 28th, the greatest amounts occurring on the 3d-4th. There were snow flurries at many stations on the 2d, 4th, 18th, 19th and 20th and measureable amounts were noted in the more elevated sections on the 4th and 20th.

FLOOD

Heavy rains from the 2d to the 4th caused the smaller streams in the central counties to overflow. A flood stage of 27.8 feet was reached at Glenville on the 5th and a flood stage of 21.4 feet at Creston on the same day.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 28th; Creston, 2d; Hinton, 19th, 25th, 26th, and 27th; Huntington, 2d; Mannington, 7th; Martinsburg, 17th; Pickens, 28th; Pt. Pleasant, 7th; Stony River Dam, 28th; Terra Alta, 2d, 3d, 27th and 28th; Williamson, 3d.

Halos, lunar: Elkins, Huntington, and Terra Alta, 15th; Parkersburg, 20th; Terra Alta, 26th.

Halo, solar: Terra Alta, 16th.

Sleet: Parsons and Pickens, 2d; Union, 22d; Stony River Dam, 29th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 3d, 20; 26th, 1; 27th, 8; 28th, 8.

ERRATA

JANUARY, 1932—Page 2, Camden-on-Gauley, make total precipitation 5.15 inches and departure from the normal +1.55 inches; page 3, on the 6th .77 and on the 29th .66 and total for the month 5.15 inches.

ANNUAL, 1931—Page 51, Buckhannon, make mean temperature for December 42.6° and departure from the normal +8.8°.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for February, 1932

HENRY C. HOWE, Meteorologist

Vol. XL Parkersburg, W. Va., March, 1932 No. 3

GENERAL SUMMARY

For March, 1932, the temperature was much below the normal and the precipitation considerably above. The longest period of low temperature of March record probably occurred from the 5th to the 16th, when the lowest temperature of the winter was noted. After the 16th the temperature averaged near the normal. The precipitation was fairly well distributed throughout the month and over the State. The snowfall was heavy. Heavy drifting snow fell over the northern counties on the 5-6th and 27-28th, making travel by automobile difficult in the mountain regions. Moderately high winds prevailed on the 22d, but only slight damage resulted. A few roofs and small buildings were damaged in Parkersburg and vicinity, causing a loss of approximately $4,000.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 36.6°. The departure from the normal for 44 stations having ten or more years of record was −6.1°. The month opened moderately warm but unusually cold weather prevailed from the 5th to the 16th. After the 16th the temperatures averaged near the normal. The highest temperatures occurred on the 3d, 21st and 30th, the temperature being generally the highest over the extreme eastern counties on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 94 stations, was 5.32 inches. The departure from the normal for 66 stations having ten or more years of record was + 1.39 inches. The precipitation was heaviest over the northern mountain counties and lightest over the extreme eastern counties and the northern Ohio River counties. The greater portion of the precipitation was received on the 3d-4th, 6th, 17th, 20th-22d, 26-28th, 30th-31st, the greatest amounts being measured on the 17th and 27-28th. Most of the snow fell on the 6th, 13-14th and 28th. The following monthly amounts, in inches, were noted: Pickens, 39.0; Alpena, 37.0; Bayard, 34.0; Horton, 30.8; Stony River Dam, 26.0.

FLOOD

Slight floods occurred in the Little Kanawha River on the 18th and 28-29th. On the 18th the crest stage at Glenville, was 25 feet, and at Creston, 20.7 feet. On the 28th the crest stage at Glenville was 24 feet and at Creston, 21.3 feet.

MISCELLANEOUS PHENOMENA

Fogs, dense: Williamson, 2d; Pickens, Richwood and Terra Alta, 4th; Richwood and Terra Alta, 5th; Glenville, Mannington, Parkersburg, Parsons, and Terra Alta, 17th.

MISCELLANEOUS PHENOMENA (Continued)

Halo, lunar: Elkins, 18th.

Sleet: Lost Creek and New Cumberland, 2d; New Cumberland and Wellsburg, 21st; Martinsburg, 28th.

Thunderstorms (dates and number of stations reporting): 17th, 4; 21st, 2; 22d, 6; 27th, 2.

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

HENRY C. HOWE, Meteorologist

Vol. XL   Parkersburg, W. Va., April, 1932   No. 4

GENERAL SUMMARY

April was cool and dry. Freezing temperature and heavy to killing frosts occurred generally during the second decade and also from the 27th to the 29th, killing early peach bloom in many localities. Owing to the earliness of the season, there was little damage to vegetation. The precipitation was the lightest of April State record since 1915, except 1930. The snowfall was less than one-half the normal. From the 13th to the 22d there were practically no precipitation. There were no destructive storms. At the close of the month the ground was being rapidly prepared for corn. The month was favorable for outdoor work.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 50.9°. The departure from the normal for 45 stations having ten or more years of record was —0.6°. Moderately high temperature prevailed from the 2d to the 9th, the 20th to the 22d, and on the 29-30th, with the highest temperatures generally on the 7th, 20th, 22d and 29th. The temperature was continuously low from the 11th to the 19th and from the 20th to the 25th.

PRECIPITATION

The average precipitation for the State, determined from 94 stations, was 2.21 inches. The departure from the normal for 66 stations having ten or more years of record was —1.37 inches. Most of the precipitation was received from the 8th to the 14th, 22d to the 27th, and on the 30th. Light snow fell in many localities on the 1st, 11th, 12th, 13th and 27th, the greatest falls being noted on the 12-13th.

LIGHT HAIL

Light hail, doing no damage, was noted in the following counties on the dates given: Pleasants, 5th; Roane, 6th; Brooke and Ohio, 25th; Mingo, 11th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 25th; Hinton, Huntington, and Marlinton, 22d; Parsons, 25th: Pt. Pleasant, 22d; Stony River Dam, 9th, 10th, and 11th; Terra Alta, 9th, 10th, and 26th; Thomas, 10th.

Halos, lunar: Elkins, Parkersburg, and Parsons, 16th.

Halos, solar: Parsons and Terra Alta, 4th; Parkersburg, 16th; Elkins, Parsons, Pickens, and Terra Alta, 20th.

Sleet: Bens Run and Lost Creek, 27th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 4th, 1; 5th, 17; 6th, 4; 21st, 4; 24th, 1; 25th, 13; 26th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record. but all complete reports are used in determining section means. † Also on otherdates. †† Received too late to be included in means and summaries

Reference letters. ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for April, 1932

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

HENRY C. HOWE, Meteorologist

VOL. XL PARKERSBURG, W. VA., MAY, 1932 No. 5

GENERAL SUMMARY

The temperature averaged slightly above the normal and the precipitation somewhat below normal. There were but three periods of moderately warm weather, while the temperature was below the normal for about two-thirds of the month. Light to killing frosts occurred on the 3d and 30th, the damage from frost being practically limited to the mountain regions. Although the precipitation averaged only about two-thirds of an inch below the normal, a drought prevailed in most of the western counties at the close of the month. The rainfall was heavy over the northeastern counties, caused by a storm that moved along the Atlantic coast. Over most of the central-western counties and Great Kanawha River regions, the rainfall was generally especially light, being the lightest of May State record in several localities. Growth was slow or stunted during the last decade on account of lack of moisture. At the close of the month pastures and meadows were in rather poor condition and small fruits were scarce.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 62.1°. The departure from the normal for 42 stations having ten or more years of record was +0.6°. The temperature was above the normal from the 4th to the 9th and on the 15-16th and 25-27th, the highest temperatures occurring generally on the 25-26th. Cool weather prevailed on the 2d-4th, 11-12th, 17-20th, 22d-24th, and the 28th-31st, the lowest temperatures generally occurring on the 3d.

PRECIPITATION

The average precipitation for the State, determined from 93 stations, was 3.11 inches. The departure from the normal for 62 stations having ten or more years of record was −0.67 inch. Nearly all the rainfall was received on the 1st, from the 9th to the 15th, and on the 27-28th, but scattered light rains fell in many localities on the 4-5th, 17th, 21st-22d, and 26th.

LIGHT HAIL

Light hail fell at Wheeling, Ohio County, on the 5th and 8th, doing no damage.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 14th; Bens Run, 15th and 31st; Elkins, 30th and 31st; Hinton, 14th; Marlinton, 14th, 22d, 24th, 26th, 27th, and 30th; New Cumberland, 3d; Ravenswood, 1st; Richwood, 13th; Stony River Dam, 10th and 11th; Terra Alta, 9th, 10th, and 12th; Wheeling, 6th.

Halo, solar: Parsons, 19th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 3d, 1; 4th, 4; 5th, 9; 6th, 1; 8th, 7; 9th, 14; 10th, 4; 11th, 2; 12th, 1; 13th, 1; 21st, 4; 22d, 4; 24th, 1; 25th, 3; 26th, 3; 27th, 8; 28th, 8.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1932

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

ROBERT P. POWELL, Meteorologist

VOL. XL   PARKERSBURG, W. VA., JUNE, 1932   No. 6

GENERAL SUMMARY

The temperature averaged slightly above the normal and the precipitation practically normal. The daily temperatures generally averaged slightly above normal or near normal, except for a few days. Cool weather prevailed at the close of the first decade and the beginning of the second decade, causing frosts in sections of the mountain regions. The damage, however, was reported as slight. Light frost was also noted in a few sections on the 24th. The precipitation was generally below normal over the northern portions of the State and was considerably above normal over the southern half of the State, making the State average practically normal. There was abundant rain after the 11th, causing an excellent advancement of all crops. During a thunderstorm, moderately high winds prevailed over the central-western counties on the 27th. The only damage reported was in Parkersburg and vicinity, where the loss to property and wires was estimated to be about $3000. There was but slight damage from hail.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 70.1°. The departure from the normal for 44 stations having ten or more years of record was +1.3°. Moderately warm weather prevailed the first week, from the 17th to the 23d, and from the 26th to the close of the month. The temperature was low from the 7th to the 13th and on the 24th.

PRECIPITATION

The average precipitation for the State, determined from 92 stations, was 4.46 inches. The departure from the normal for 63 stations having ten or more years of record was +0.07 inch. The precipitation was heaviest over the south-central counties and lightest over the northwestern counties. The greater portion of the rainfall was received on the 4th, 6-7th, 11th-18th and the 26-28th, the rainfall being excessive over the the central counties on the 27-28th.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Cabell, 20th; Randolph, 21st; Tucker, 6th; Upshur, 15th.

HEAVY HAIL

Heavy hail fell at Osceola, Randolph County, on the 20th. The storm moved from the southwest about ten miles. The path of the storm was about two miles in width. Some of the stones ranged in diameter from one-half to one and one- half inches. Trees and crops were stripped of leaves. Damage probably near $500.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 21st; Bancroft, 17th; Brandywine, 18th, 19th, and 29th; Glenville, 13th and 14th; Hinton, 7th and 21st; Marlinton, 1st to the 6th, 8th, 9th, 16th to the 18th, 21st, 24th, 25th, 29th, and 30th; New Cumberland, 14th; Parsons, 8th and 9th; Rowlesburg, 15th; Terra Alta, 12th, 13th, 15th, 17th, and 19th; Williamson, 29th and 30th.

MISCELLANEOUS PHENOMENA (Continued)

Frost, light to heavy: Alpena, Arbovale, Bayard, Brandywine, Bruceton Mills, Buckhannon, Glenville, Horton, Pickens, Richwood, Terra Alta, Union, Wardensville, and Wellsburg, 8th and 9th; Bayard and Terra Alta, 24th.

Thunderstorms (dates and number of stations reporting): 1st, 2; 2d, 2; 3d, 1; 5th, 5; 6th, 11; 7th, 3; 13th, 4; 14th, 1; 15th, 8; 16th, 6; 17th, 4; 18th, 6; 19th, 5; 20th, 10; 21st, 1; 26th, 8; 27th, 11; 28th, 1; 30th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries
Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for June, 1932

ROBERT P. POWELL, Meteorologist

VOL. XL PARKERSBURG, W. VA., JULY, 1932 No. 7

GENERAL SUMMARY

The past month was slightly warmer and much wetter than usual, being the wettest July of State record since 1912, and the wettest month since October, 1929. Monthly amounts exceeding 10 inches fell over the Great Kanawha Watershed, causing serious floods in some of the smaller streams. A marked flood prevailed in Elk River on the 5-6th, causing considerable damage by flooding crops, washing away many bridges, and covering highways with 3 to 4 feet of water. Exceptionally heavy rains fell over the valleys of Armstrong and Paint creeks, in Fayette and Kanawha counties, during the night of the 10-11th, causing disastrous floods. Along a 20-mile stretch of Paint creek, about 30 miles from Charleston, W. Va., 18 persons lost their lives, many buildings were washed away, and miles of railroad damaged. On Armstrong creek, many houses were flooded and washed away, and one life lost. Property damage estimated, $1,000,000. Under favorable weather conditions crops made rapid growth, and at the close of the month were generally in excellent condition. Hay harvest was practically completed with a fair yield. Corn prospects were excellent. There was but slight damage from hail.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 73.1°. The departure from the normal for 45 stations having ten or more years of record was +0.2°. Warm weather prevailed from the 14th to the 22d, with the highest temperature occurring generally on the 20th or 21st. The temperature was moderately low from the 2d to the 5th, and from the 24th to the close of the month, with the lowest readings on the 3d and 24th.

PRECIPITATION

The average precipitation for the State, determined from 92 stations, was 6.02 inches. The departure from the normal for 65 stations having ten or more years of record was +1.56 inches. The precipitation was unusually heavy over the Great Kanawha Valley, and lightest over the extreme southern counties. The greatest monthly precipitation was 15.56 inches at Clay, and the least was 1.02 inches at Union. The greatest amount in any 24 consecutive hours was 6.22 inches at Clay on the 5th.

LIGHT HAIL

Light hail, doing practically no damage, was noted in the following counties on the dates given: Greenbrier and Preston, 7th; Pleasants, 15th; Mingo, 16th; Wood, 21st; Preston, Taylor, and Upshur, 22d; Brooke, 29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 15th and 28th; Bancroft, 29th and 31st; Bens Run, 7th, 13th, 30th, and 31st; Elkins, 7th, 12th, 15th, 19th, 24th, 25th, and 31st; Glenville, 13th, 25th, 30th, and 31st; Grafton, 29th, 30th, and 31st; Hinton, 6th and 13th; Marlinton, 5th, 7th, 11th, 12th, 13th, 18th, 19th, 23d, 25th, 28th, and 29th; Parkersburg, 7th; Terra Alta, 4th, 6th, 28th, 29th, and 30th; Wellsburg, 28th and 30th; Williamson, 12th, 13th, 25th, 28th, and 30th.

Thunderstorms (dates and number of stations reporting): 1st, 7; 2d, 6; 3d, 1; 5th, 3; 6th, 5; 7th, 9; 8th, 5; 10th, 5; 11th, 4; 14th, 2; 15th, 9; 16th, 13; 17th, 2; 21st, 6; 22d, 15; 23d, 2; 26th, 1; 27th, 12; 28th, 5; 29th, 13.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on otherdates. †† Received too late to be included in means and summaries
Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1932

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

ROBERT P. POWELL, Meteorologist

VOL. XL   PARKERSBURG, W. VA., AUGUST, 1932   No. 8

GENERAL SUMMARY

August was somewhat warm and unusually dry, with an abundance of sunshine. The average number of clear days, 20, was the greatest of August State record. The rainfall occurred mostly in the form of thundershowers, and was unfavorably distributed. Moderately cool weather for the season prevailed from the 19th to the 22d, with the lowest readings on the mornings of the 20th and 21st. The warmest weather of the summer occurred on the last day of the month, with maximum temperatures near or slightly above 100 degrees. Showers occurred frequently during the first few days of the month, and again on the 11th and 12th, but the amounts received were mostly light and unimportant. Heavy to excessive rains occurred generally throughout the State on the 18th and 19th. Exceptionally dry weather prevailed after the 19th, and there were many stations having 10 to 12 days without measurable rain. On account of the warm, dry weather, the month was unfavorable for growth and farm work. Early corn was being cut with yield fair to good. Pastures and meadows were short and making slow growth. Fall plowing was retarded by dry soil. At the close of the month springs and watering places were dry in many localities in the southern and eastern counties.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 72.1°. The departure from the normal for 45 stations having ten or more years of record was +0.7°. The temperature was somewhat below the normal on the 1st and 2d, 11th to the 15th, and from the 19th to the 22d, and above the normal from the 4th to the 10th, and from the 24th to the 31st. The highest monthy mean was 77.6° at Charleston and the lowest was 64.6° at Alpena and Terra Alta. The highest temperature was 104° at Charleston and Moorefield on the 31st, and the lowest was 38° at Bayard and Terra Alta on the 20th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 3.04 inches. The departure from the normal for 64 stations having ten or more years of record was −1.13 inches. The greatest monthly precipitation was 6.57 inches at Davis, and the least was 0.35 inch at Bancroft. The greatest amount in any 24 consecutive hours was 3.68 inches at Woodlands on the 18th. The average number of days with .01 inch or more of precipitation was 6.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 18th, 19th, and 20th; Arbovale, 6th; Bancroft, 5th, 14th, 15th, 21st, 22d, and 24th; Bens Run, 14th, 20th, 24th, and 25th; Buckhannon, 12th; Elkins, 1st, 7th, 9th, 11th, 12th, 14th, 15th, 16th, 21st to the 26th, and 31st; Glenville, 1st, 6th, 16th, 20th, 22d, 23d, 25th, 30th, and 31st; Hinton, 9th, 23d, and 29th; Marlinton, 7th, 13th, 15th, 17th, 19th to the 26th, and 31st; New Cumberland, 8th, 15th, and 22d; Terra Alta, 12th and 14th; Wellsburg, 11th, 12th, 13th, and 21st; Williamson, 5th, 9th, 15th, 20th, and 29th.

Solar eclipse observed during the afternoon of the 31st.

Thunderstorms (dates and number of stations reporting): 1st, 4; 3d, 6; 4th, 2; 5th, 1; 7th, 3; 10th, 6; 11th, 6; 12th, 1; 18th, 4; 19th, 1; 26th, 1; 29th, 2; 30th, 1.

LIBRARY

Vol. XL Parkersburg, W. Va., September, 1932 No. 9

GENERAL SUMMARY

September averaged somewhat warmer and much drier than usual. The month opened abnormally warm, with the highest temperatures of September record at a number of stations in the central and eastern districts. Light to heavy frosts occurred in scattered sections on the 8th, 18th, and 25th, and the first general heavy frost on the 30th. On the morning of the 30th the temperature ranged generally from 30° to 40°, with a low reading of 25° at Bayard. The rainfall averaged slightly more than one-half of the normal, and fell mostly on the 4th, 22-23d, and on the 27-28th. From the 5th to the 21st there was practically no precipitation. The rainfall was the heaviest over the extreme southeastern counties, and lightest over the central districts. The droughty conditions of August continued through September, and at the close of the month small streams and watering places were practically dry, and farmers were hauling water for their stock. Corn was in shock and husking was somewhat general. A large yield of potatoes was secured. Plowing and fall seeding was much retarded by lack of soil moisture.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 66.5°. The departure from the normal for 46 stations having ten or more years of record was +0.4°. The temperature was above the normal from the 1st to the 5th, 10th, 11th, 13th to the 16th, and from the 18th to the 23d, and below the normal from the 6th to the 9th, 17th, and from the 24th to the 30th. The highest monthly mean was 71.8° at Huntington and the lowest was 58.2° at Alpena. The highest temperature was 106° at Moorefield on the 1st, and the lowest was 25° at Bayard on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 93 stations, was 1.58 inches. The departure from the normal for 65 stations having ten or more years of record was −1.47 inches. The greatest monthly precipitation was 4.66 inches at Marlinton, and the least was 0.10 inch at Sharples. The greatest amount in any 24 consecutive hours was 2.40 inches at Marlinton on the 23d. The average number of days with .01 inch or more of precipitation was 6.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 24th and 25th; Arbovale, 5th; Bancroft, 6th, 11th, and 18th; Bens Run, 12th, 16th, 24th, 29th, and 30th; Bruceton Mills, 23d; Charleston, 15th; Elkins, 1st, 5th to the 11th, 13th, 16th, 24th, 25th, and 30th; Glenville, 5th, 14th, 15th, 24th, 25th, and 30th; Grafton, 8th, 10th, and 29th; Hinton, 13th, 15th, 23d, and 30th; Huntington, 29th; Marlinton, 3d, 5th, 7th, 9th, 10th, 12th, 13th, 15th, 16th, 24th, 25th, 29th, and 30th; Parkersburg, 29th and 30th; Pt. Pleasant, 22d, 29th, and 30th; Terra Alta, 3d, 24th, 26th, 28th, and 29th; Wellsburg, 8th, 24th, 25th, and 30th; Williamson, 5th, 8th, 9th, 16th, 29th, and 30th.

MISCELLANEOUS PHENOMENA (Continued)

Halos, solar: Parkersburg, 19th; Terra Alta, 27th.

Thunderstorms (dates and number of stations reporting): 1st, 5; 2d, 6; 3d, 7; 11th, 2; 13th, 3; 14th, 3; 21st, 1; 22d, 5; 23d, 5; 24th, 1; 27th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

ROBERT P. POWELL, Meteorologist

VOL. XL PARKERSBURG, W. VA., OCTOBER, 1932 No. 10

GENERAL SUMMARY

October was somewhat warm and generally cloudy, with the temperature extremes well within previous records. Although the month was warm, the average temperature was more than 2.0° lower than for October, 1931. Unusually warm weather for the season prevailed during the first few days of the month, the highest temperature occurring generally on the 3d. The precipitation averaged much above the normal, except in the Ohio River counties and in the extreme southern districts. Heavy to excessive rains occurred in the eastern sections on the 6th, and 17-18th, causing considerable damage to corn on low bottoms by marked rises in the smaller streams and rivers. The first general killing frost of the season formed on the 29th, but on account of the lateness of the season very little damage resulted. Light snow or snow flurries occurred at many of the mountain stations on the 6th and 28th, with amounts ranging from trace to 3.0 inches. The weather was favorable for apple-picking, corn husking, and farm work. Meadows and pastures were much improved by the warm, wet weather.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 54.9°. The departure from the normal for 45 stations having ten or more years of record was +0.5°. Warm weather prevailed from the 2d to the 4th, 15th to the 20th, and from the 23d to the 26th, with the highest readings occurring generally on the 3d. Cool weather prevailed from the 5th to the 8th, 11th to the 14th, and on the 21st and 22d, and from the 28th to the 31st, with the lowest temperatures occurring generally on the 29th and 31st. The highest monthly mean was 60.0° at Huntington, and the lowest was 49.2° at Terra Alta. The highest temperature was 90° at Martinsburg on the 16th, and the lowest was 22° at Marlinton on the 29th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 3.91 inches. The departure from the normal for 64 stations having ten or more years of record was +0.82 inch. The precipitation was generally heavy over the eastern panhandle section, and light over the Ohio River counties. Light snow or snow flurries occurred generally in the mountain districts on the 6th and 28th. The greatest monthly precipitation was 7.21 inches at Harpers Ferry, and the least was 2.12 inches at Dam No. 19, Ohio River. The greatest amount in any 24-consecutive hours was 2.50 inches at Upper Tract on the 6th. The average number of days with .01 inch or more of precipitation was 9.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 14th; Arbovale, 14th and 15th; Bancroft, 3d, 10th, 14th, and 21st; Bens Run, 1st, 3d, 8th, 9th, 10th, and 22d; Charleston, 15th; Elkins, 3d, 8th, and 14th; Glenville, 1st, 7th, 8th, 14th, and 22d; Grafton, 1st, 14th, and 22d; Huntington, 1st, 5th, 19th, and 25th; Mannington, 22d and 24th; Marlinton, 1st, 2d, 3d, 8th, 9th, 10th, 14th, and 15th; Parkersburg, 1st and 14th; Pt. Pleasant, 9th; Richwood, 9th and 12th; Stony River Dam, 17th; Terra Alta, 7th, 14th, 17th, 19th, and 24th; Williamson, 22d.

Halo, lunar: Pickens, 14th.

Halo, solar: Parkersburg, 30th.

Thunderstorms; Creston, Parkersburg, and Valley Chapel, 27th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for October, 1932

ROBERT P. POWELL, Meteorologist

Vol. XL Parkersburg, W. Va., November, 1932 No. 11

GENERAL SUMMARY

The past month was unusually cold, being the coldest November since 1926. The temperature for the month was characterized by a warm period that prevailed from the 4th to the 9th, and a cold period from the 16th to the 29th. A cold wave set in near the close of the month with temperature readings near or slightly above zero in the mountain districts. While the average monthly precipitation for the State was somewhat above the normal, the average amounts for the different sections varied considerably. The panhandle section received considerably more than the normal precipitation, while the southern section was slightly below the normal. Heavy to excessive rain fell over the eastern portions of the State on the 9th, with amounts exceeding 2.50 inches in 24 hours in sections of Berkeley and Jefferson counties. The average snowfall for the State was exceptionally light, being one of the lightest of November State record. Temperature readings of 70° or above were recorded generally throughout the State on the 7th and 8th, with a high reading of 85° at Robertsburg. The weather was generally favorable for outdoor work, and at the close of the month wheat was in good condition, and pastures and meadows were green in scattered localities.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 40.9°. The departure from the normal for 43 stations having ten or more years of record was —2.0°. Warm weather prevailed from the 4th to the 9th, 15th, and on the 30th, with the highest readings occurring generally on the 8th. Cold weather occurred from the 1st to the 3d, and from the 16th to the 29th, with the lowest temperature occurring generally on the 27th. The highest monthly mean temperature was 46.1° at Huntington, and the lowest was 34.4° at Marlinton. The highest temperature was 85° at Robertsburg on the 8th, and the lowest was zero at Bayard on the 27th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 3.34 inches. The departure from the normal for 65 stations having ten or more years of record was +0.18 inch. The precipitation was generally heavy over the northern mountain counties and eastern section, and light over the southern counties. Practically all the precipitation occurred on the 1st, 5-6th, 9-10th, 16th to the 20th, and on the 26th. Light snow or snow flurries occurred generally on the 11-12th, and on the 19th. The greatest monthly precipitation was 6 27 inches at Kearneysville, and the least was 0.89 inch at Dam No. 6. The greatest amount in any 24 consecutive hours was 3.14 inches at Harpers Ferry on the 9th. The average number of days with .01 inch or more of precipitation was 8.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 18th; Bens Run, 2d, 5th, and 6th; Buckhannon, 6th and 7th; Elkins, 3d, 5th, 6th, 8th, 18th, and 24th; Grafton, 8th and 18th; Hinton, 2d and 3d; Huntington, 3d, 18th, 25th, 29th, and 30th; Mannington, 6th, 10th, and 25th; New Cumberland, 8th and 16th; Pt. Pleasant, 2d, 3d, and 7th; Stony River Dam, 6th, 8th, 9th, and 17th; Terra Alta, 1st, 2d, 7th, 8th, 17th, and 19th; Wheeling, 28th; Williamson, 2d, 3d, 6th, 7th, and 8th.

Sleet: Richwood, 1st; Stony River Dam, 17th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for November, 1932

ROBERT P. POWELL, Meteorologist

VOL. XL PARKERSBURG, W. VA., DECEMBER, 1932 NO. 12

GENERAL SUMMARY

December was warm and dry, with the snowfall somewhat above the average. The month was about equally divided into warm and cold periods. Unusually warm weather for the season prevailed on the 6th, 24th, 25th, and 30th, with maximum readings near or slightly above the December record. The maximum temperature on the 24th ranged from 67 degrees to 82 degrees. Temperatures were continuously low from the 7th to the 22d, with readings below zero on the mornings of the 16th, 18th, and 19th. A low reading of 12 degrees below zero was recorded at Lost Creek on the 16th, and at Ryan on the 18th. Although the month was warm, the average temperature was 6 degrees lower than for December, 1931. While the monthly precipitation was somewhat below the average, the amounts were well distributed over the State and throughout the month. The snowfall occurred mostly during the second decade. Dense fog prevailed throughout the State on the 29th, interrupting highway and river traffic. Navigaion was impeded or closed on all navigable streams of the State from the 16th to the 22d, on account of heavy floating ice. Wheat was well protected during the cold weather by snow cover, and at the close of the month was in excellent condition. Grass was green in scattered localities.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 36.0°. The departure from the normal for 46 stations having ten or more years of record was +1.9°. Warm weather prevailed from the 1st to the 7th, and from the 22d to the close of the month, with the highest temperature occurring on the 24th. Cold weather occurred from the 8th to the 21st, with the lowest readings on the 16th and 18th. The highest monthly mean temperature was 41 2° at Bluefield, and the lowest was 30.0° at Marlinton. The highest temperature was 82° at Glenville on the 24th. The greatest daily range was 59° at Wardensville.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 2.83 inches. The departure from the normal for 64 stations having ten or more years of record was —0.51 inch. The precipitation was somewhat heavy in scattered localities of the northern and southern sections, and light in the eastern section. Light to moderately heavy snow occurred generally on the 10th, 13th, 14th, and 18th. The greatest monthly precipitation was 4.30 inches at Gary, and the least was 1.09 inches at Wardensville. The greatest amount in any 24 consecutive hours was 1.51 inches at Gary on the 28th. The greatest monthly snowfall was 15.0 inches at Durbin. The average number of days with .01 inch or more of precipitation was 12.

MISCELLANEOUS PHENOMENA

Fogs, dense: Aberdeen, 29th; Alpena, 28th; Arbovale, 11th; Bens Run, 19th, 27th, and 29th; Buckhannon, 28th; Creston, 11th, 12th, and 29th; Elkins, 20th and 29th; Fairmont, 28th and 29th; Glenville, 29th and 30th; Hinton, 20th and 22d; Huntington, 3d, 4th, 13th, 15th, 19th, 27th, and 28th; Kearneysville, 28th, 29th, and 30th; Lost Creek, 29th; Mannington, 21st and 29th; Marlinton, 29th and 30th; New Cumberland, 23d, 24th, 29th, and 30th; Parkersburg, 20th and 29th; Pickens, 11th and 28th; Terra Alta, 14th, 22d, 24th, 25th, 28th, and 29th; Wardensville, 29th; Wheeling, 1st, 2d, and 3d; Williamson, 10th and 22d.

Halo, lunar: Elkins, 3d.

Halos, solar: Elkins, 25th and 26th.

Sleet: Alpena, 10th; Bruceton Mills, 10th and 11th; Cairo, 11th; Fairmont, 11th; Gary, 17th; Huntington, 10th and 31st; Lewisburg, 10th; Marlinton, 10th and 13th; Morgantown, 9th; Ryan, 12th, 13th, and 22d.

Thunderstorm: Cairo, 7th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for December, 1932

Vol. XL Parkersburg, W. Va., Year, 1932 No. 13

GENERAL SUMMARY

The year 1932 averaged considerably warmer and somewhat wetter than usual. The snowfall was the lightest of State record.

The winter months were abnormally warm, while the early spring and late fall periods were cold. January and February were the warmest winter months of State record. The summer and early fall seasons were somewhat warm.

A wet winter was followed by generally dry weather during April and May. The precipitation during March was unusually heavy. The summer and fall months were wet, except August and September. Heavy to excessive rains occurred in Fayette and Kanawha counties during July, causing serious floods in the smaller streams, with loss of many lives and great destruction to property.

The spring months were favorable for farming operations. During the latter part of February early peach bloom developed rapidly, but the cold weather of March caused considerable damage. The season of growth was ample for ripening of all crops, extending generally from the middle of April to the last week in October.

The sunshine at Parkersburg averaged 53 per cent. of the possible amount, or 7 per cent. above the normal. For Elkins the average was 52 per cent., or 6 per cent. above the normal.

The wind movement for Parkersburg was 59,985 miles, and at Elkins 52,115 miles.

THE WEATHER BY MONTHS

JANUARY.—The month was the warmest January of State record, with an average temperature of 43.4 degrees. The previous warmest January was in 1913, when the average temperature was 40.7 degrees. The precipitation was considerably above the normal, and was excessive in many of the central counties, causing marked floods in the smaller rivers. The snowfall was the least of January State record, the average for the month being only 0.3 inch. Stock remained in the open practically the entire month.

FEBRUARY.—The month was much warmer and wetter than usual. The average temperature, 41.6 degrees, was the highest of February State record. The precipitation averaged considerably above the normal, while the snowfall was the least of February State record. Maximum temperatures were exceptionally high on the 11th. At the close of the month early peach trees were in bloom in many localities.

MARCH.—The average temperature, 36.6 degrees, was considerably below the normal, and the precipitation was much above. The longest period of low temperature of March record probably occurred from the 5th to the 16th, when the lowest temperature of the winter occurred. The snowfall was much above the average. Heavy snow fell over the northern counties on the 5th-6th, and 27th-28th, making travel by automobile difficult in the mountain regions.

APRIL.—April was cool and dry. The average precipitation, 2.21 inches, was the least of April State record since 1915, except 1930. Freezing temperature and heavy to killing frosts occurred generally during the second decade, and also from the 27th to the 29th, killing early peach bloom in many localities. The snowfall was less than one-half the normal.

MAY.—The temperature averaged slightly above the normal, and the precipitation was somewhat below. There were but three periods of moderately warm weather, while the temperature was below the normal for about two-thirds of the month. Light to killing frosts occurred on the 3d and 30th, the damage from frost being practically limited to the mountain regions. Growth was slow or stunted during the last decade on account of lack of moisture. At the close of the month pastures and meadows were in rather poor condition and small fruits were scarce.

JUNE.—The month was somewhat warm and wet. Cool weather prevailed at the close of the first decade and the beginning of the second decade, causing frosts in sections of the mountain regions. The damage, however, was slight. Light frost was also reported from a few scattered localities on the 24th. There was abundant rain after the 11th, causing an excellent advancement of all crops. There was but small damage from hail.

JULY.—The month was somewhat warm and unusually wet, being the wettest July of State record since 1912, and the wettest month since October, 1929. Monthly amounts exceeding 10 inches fell over the Great Kanawha Watershed, causing serious floods in the smaller streams. Much corn was washed from low bottoms along the streams by high water. Temperature was much below the normal from the 2d to the 5th, and from the 24th to the close of the month. There was but slight damage from hail.

AUGUST.—August was warm and dry with an abundance of sunshine. The average number of clear days, 20, was the greatest of August State record. The rainfall fell mostly during thundershowers, and was unfavorably distributed. Unusually warm weather prevailed on the last day of the month with maximum temperatures near or slightly above 100 degrees. On account of the warm, dry weather, the month was unfavorable for growth and farm work.

SEPTEMBER.—The temperature averaged somewhat above normal and the rainfall considerably below. Light to heavy frosts occurred in scattered sections on the 8th, 18th, and 25th, and the first general heavy frost on the 30th. From the 5th to the 21st there was practically no precipitation. At the close of the month corn was in shock and husking was general. A large yield of potatoes was secured.

OCTOBER.—The month was somewhat warm and cloudy, with the precipitation considerably above the normal. Heavy to excessive rains occurred in the eastern sections on the 6th, and 17th-18th, causing considerable damage to corn on low bottoms by marked rises in the smaller streams and rivers. The first general killing frost of the season occurred on the 29th, but on account of the lateness of the season very little damage resulted. Light snow or snow flurries occurred at many of the mountain stations on the 6th and 28th. The month was favorable for apple-picking, corn husking, and farm work.

NOVEMBER.—November was unusually cold, being the coldest November since 1926. A cold wave set in near the close of the month with temperature readings near or slightly above zero in the mountain districts. The precipitation was somewhat above the normal. Heavy to excessive rain fell over the eastern sections on the 9th, with the amounts exceeding 2.50 inches in 24 hours in Berkeley and Jefferson counties. The snowfall was unusually light, being one of the lightest of November record. Winter grains were in good condition at the close of the month.

DECEMBER.—The month was warm and dry. Unusually high temperatures were recorded on the 6th, 24th, 25th, and 30th. Temperatures were continuously low from the 7th to the 22d, with readings below zero on the mornings of the 16th, 18th, and 19th. A low reading of 12 degrees below zero was recorded at Lost Creek and Ryan. The snowfall was somewhat above the average and fell mostly during the second decade.

ERRATA

Correct Monthly Climatological Data for 1932, to read: January.— Wellsburg, greatest 24-hour precipitation 1.25 on 29-30th. March. —Brownsville, mean minimum 22.4 and monthly mean 37.1. April. —Lewisburg, highest temperature 77 on the 7th. July.—Buckhannon, lowest temperature 50 on the 25th.

VOL. XLI PARKERSBURG, W. VA., JANUARY, 1933 NO. 1

GENERAL SUMMARY

The past month was abnormally warm, the average temperature, 39.8°, was slightly more than 7° above the normal, and was the third highest of January State record. The outstanding warm Januarys were in 1913 and 1932, when the averages were 40.7° and 43.4°, respectively. The month was characterized by continuously warm weather, the temperature being below the normal for only a few days. This was the fourth consecutive warm January. Unusually high temperatures for the season prevailed from the 16th to the 27th, the highest temperatures of the month ranging generally from 65° to 79°, occurring at practically all stations on the 22d. Zero temperatures were not recorded in any section of the State. The snowfall was exceptionally light, being the second lightest of January State record. While the precipitation averaged slightly above the normal, the amounts were unfavorably distributed. The month was favorable for out-door work, and plowing progressed rapidly during the second decade. Wheat was in good condition, and grass was green in many localities. Stock remained in the open practically the entire month.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 39.8°, or 7.3° above the January normal. Warm weather prevailed during the greater part of the month, with the highest temperatures occurring on the 19th and 22d. Moderately cold weather occurred on the 1st, 12th, 13th, and from the 28th to the 30th, with the lowest readings on the 1st and 13th. The highest monthly mean temperature was 45.0° at Charleston, and the lowest was 33.2° at Terra Alta. The highest temperature was 79° at Wardensville on the 19th, and the lowest, 1° at Pickens on the 1st.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 3.73 inches, which was 0.11 inch more than the normal for the month. The precipitation was the heaviest over the central counties, and lightest over the eastern sections. The greater portion of the precipitation was received on the 9th, 18-19th, 21st-22d, and the 26-28th, the precipitation being heavy over the central-southern counties on the 21st-22d. Light snow or snow flurries occurred on the 9th, and from the 26th to the 28th, with the greatest amounts on the 28th. The greatest monthly precipitation was 6.41 inches at Charleston, and the least was 1.15 inches at Upper Tract. The greatest amount in any 24 consecutive hours was 2.22 inches at Ryan on the 21st. The average number of days with .01 inch or more of precipitation was 12.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 26th; Arbovale, 15th; Bens Run, 24th; Creston, 18th and 24th; Elkins, 24th, 26th, and 27th; Glenville, 24th; Grafton, 3d, 25th, and 26th; Hinton, 4th, 6th, 16th, 19th, 22d, and 24th; Huntington, 3d, 9th, 11th, 12th, 17th, 18th, 22d, 24th, and 26th; Madison, 21st; New Cumberland, 3d, 13th, 15th, 22d, and 25th; Parkersburg, 24th; Pickens, 17th, 18th, 26th, 28th, and 29th; Ravenswood, 24th; Richwood, 3d; Terra Alta, 4th, 18th, 21st, 22d, 25th, 26th, and 27th; Wheeling, 20th; Williamson, 4th, 6th, 15th, 16th, 18th, and 24th.

Halos, lunar: Elkins, 6th, 10th, and 11th; Parkersburg, 2d, 6th, and 10th; Terra Alta, 11th; Wellsburg, 11th.

Halos, solar: Elkins, 2d, 5th, 11th, and 12th.

Sleet: Alpena, 29th; Marlinton, 28th.

Thunderstorm: Williamson, 20th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for January, 1933

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

ROBERT P. POWELL, Meteorologist

Vol. XLI   Parkersburg, W. Va., February, 1933   No. 2

GENERAL SUMMARY

The month was warm and slightly drier than usual with the temperature extremes well within previous records. This is the fourth consecutive warm February, and the third consecutive warm month. The greatest excess in temperature occurred over the Ohio River counties and in the eastern sections, while in scattered localities of the southern section there was a deficiency. The percentage of sunshine was unusually large, being nearly twice the normal amount. A cold wave covered the State from the 5th to the 12th, with readings of zero or below at practically all stations on the 6th, 9th, and 12th. The precipitation averaged near normal and was well distributed throughout the month. While the snowfall was heavy in scattered localities of the mountain districts, there were a number of stations having small amounts, ranging from one to three inches, making the average for the State somewhat below the normal. Navigation was interrupted or suspended from the 10th to the 16th, on account of moderately heavy ice. High winds prevailed generally on the 18th, 21st, 26th, and 27th, with practically no damage. During the cold weather wheat was protected by snow cover and at the close of the month was mostly in good condition. Pastures were turning green in many localities. Plowing progressed slowly.

TEMPERATURE

The monthly mean for the State, determined from 56 stations, was 34.5°, or 1.1° above the February normal. Warm weather for the season prevailed from the 17th to the 26th, with the highest temperature, 65 to 77 degrees, occurring generally on the 24th. Cold weather occurred from the 4th to the 6th, 8th to the 13th, and during the last few days of the month. The highest monthly mean temperature was 39.4° at Charleston, and the lowest was 28.1° at Terra Alta. The highest temperature was 77° at Robertsburg on the 25th, and the lowest was 12° below zero at Benson on the 12th, making the monthly range for the State 89 . The greatest daily range was 56° at Marlinton on the 8th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 3.13 inches, which was 0.04 inch less than the normal. The precipitation was the heaviest over the mountain sections, and lightest in the eastern counties. Moderate to heavy precipitation fell generally on the 7-8th, 14-15th, 20th, and 25th, with the greatest amounts on the 20th. Light to moderate snow fell generally on the 4-5th, 8th, and 11th. The greatest monthly precipitation was 7.87 inches at Pickens, and the least was 0.96 inch at Romney. The greatest amount in any 24 consecutive hours was 1.59 inches at Lewisburg on the 20th. The greatest monthly snowfall was 22.0 inches at Pickens. The average number of days with .01 inch or more of precipitation was 11.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, Bens Run, Creston, Pickens, and Richwood, 14th; Hinton, 18th; Madison, 17th and 18th; Terra Alta, 13th, 14th, 17th, and 24th.

Sleet: Parkersburg, 7th; Crawford, 9th; Terra Alta, 15th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means.
† Also on other dates †† Received too late to be included in means and summaries
Reference letters. ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for February, 1933

ROBERT P. POWELL, Meteorologist

VOL. XLI PARKERSBURG, W. VA., MARCH, 1933 No. 3

GENERAL SUMMARY

The month was somewhat cold and exceptionally wet, being the wettest March since 1917, and the third wettest of March State record. The average precipitation, 5.92 inches, was nearly twice the normal. Monthly amounts exceeding nine inches were reported from the mountain districts. Precipitation occurred almost daily from the 13th to the 26th, with unusually heavy amounts in sections of the central valleys, causing marked floods in the rivers and small streams. Warm weather for the season prevailed from the 13th to the 20th. Temperature readings of zero or slightly above were general on the mornings of the 6th and 11th. While the snowfall averaged slightly below the normal, heavy amounts were reported from scattered localities in the mountain districts. On account of the wet condition of the soil, and large number of rainy days, the month was unfavorable for farm work. At the close of the month, meadows and pastures were turning green, and early fruit buds were beginning to swell.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 40.5°, or 1.8° below the March normal. Cold weather prevailed from the 1st to the 6th, 9th to the 12th, and from the 21st to the 30th, with the lowest readings on the 6th and 11th. Mild weather for the season occurred during the second decade, the temperature being much above the average on the 13th, 14th, 19th, and 20th. The highest monthly mean temperature was 45.6° at Huntington, and the lowest was 33.9° at Bayard. The highest temperature was 80° at Charleston on the 20th, and the lowest was 4° below zero at Pickens on the 11th, making the monthly range for the State 84°. The greatest daily range was 54° at Lost Creek on the 6th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 5.92 inches, which was 2.05 inches more than the normal. The precipitation was the heaviest over the mountain districts and lightest in the eastern counties. Precipitation was general on the 2d-4th, 7-10th, 13-15th, 18-26th, and 31st, the greatest amounts being measured on the 7th, 13-14th, and 18-19th. Light to moderate snow fell on the 3d, 8th, 10th, and 26th. The greatest monthly precipitation was 11.59 inches at Pickens, and the least was 1.59 inches at Upper Tract. The greatest monthly snowfall was 41.0 inches at Pickens. The average number of days with .01 inch or more of precipitation was 15.

RIVER

Flood stages prevailed in this district from March 15 to March 25, caused by heavy rains over the upper Ohio watershed. The following crest stages, in feet and tenths, were noted: St. Marys, 39.6; Marietta, 41.0; Parkersburg, 42.4; Dam 19, 43.1; Dam 20, 43.5; Dam 22, 46.4; Dam 25, 51.5; Point Pleasant, 50.9; Huntington, 56.9.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Marion, 15th; Mingo, 13th, 14th, and 23d; Randolph, 14th; Ritchie, 15th; Roane, 25th; Summers, 14th.

MISCELLANEOUS PHENOMENA

Halos, lunar: Elkins and Pickens, 6th.

Sleet: Elkins, 25th; Fairmont, 23d.

Thunderstorms (dates and number of stations reporting): 7th, 3; 8th, 9; 9th, 7; 13th, 16; 14th, 21; 15th, 13; 17th, 1; 18th, 4; 19th, 6; 20th, 4; 25th, 1.

ERRATUM

February, 1933—Page 6, New Cumberland, make total snowfall 4.0 inches.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters. [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

WEST VIRGINIA SECTION

40

ROBERT P. POWELL, Meteorologist

VOL. XLI   PARKERSBURG, W. VA., APRIL, 1933   No. 4

GENERAL SUMMARY

The month was warmer and considerably wetter than usual. Precipitation occurred frequently and was well distributed throughout the month, the greatest amounts being received in the northeastern panhandle section and mountain districts, and the least in the western counties and extreme southern section. The highest temperatures occurred generally on the 10th, 29th, and 30th, and the lowest readings were noted on the 13th, 22d, 23d, and 27th. Freezing temperatures and heavy to killing frosts were reported from practically all sections on the 23d and 24th, causing slight damage to peach, cherry, and plum bloom. The snowfall was unusually light, measurable amounts being reported from the mountain districts. Owing to frequent rains the month was unfavorable for farm work. Plowing and planting were considerably retarded, and at the close of the month were about three weeks behind the average. Wheat, rye, and pastures were in excellent condition and making good growth. Potatoes were being planted and oats being sown in some of the drier localities. A severe local wind storm occurred at Weston, Lewis County, during the afternoon of the 6th. The roof of one building was blown off, and a sign and skylight of a lumber company were destroyed, with a loss of approximately $2,200.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 52.8°, or 1.0° above the April normal. Cool weather prevailed on the 4th, 7th, 8th, 12th, 13th, and from the 17th to the 28th, with the lowest readings occurring generally on the 13th, 22d, and 23d. The temperature was much above the normal on the 1st and 2d, 9th and 10th, 14th, 16th, and on the 29th and 30th. The highest monthly mean temperature was 57.2° at Charleston, and the lowest, 46.7° at Marlinton. The highest temperature was 91° at Charleston on the 30th, and the lowest, 19° at Bayard on the 22d, making the monthly range for the State 72°. The greatest daily range was 53° at Wardensville on the 24th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 4.08 inches, which was 0.55 inch more than the normal. The precipitation was the heaviest over the mountain districts and lightest in the western counties and southern section. Heavy precipitation occurred generally on the 11th and 12th, and from the 18th to the 20th. Light snow was general in the mountain districts on the 12th, and from the 18th to the 21st. The greatest monthly precipitation was 6.34 inches at Pickens, and the least, 2.44 inches at Hinton. The greatest amount in any 24 consecutive hours was 2.00 inches at Upper Tract on the 20th. The average number of days with .01 inch or more of precipitation was 13.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Brooke, 26th; Harrison, 6th; Monongalia, 4th; Preston, 24th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Bancroft, 3d; Mannington, 13th and 17th; Stony River Dam, 11th.

Halos, lunar: Parkersburg, 4th; Pickens, 5th.

Sleet: Parkersburg, 7th; New Cumberland, 8th; Wardensville, 20th; Wellsburg, 7th.

Thunderstorms (dates and number of stations reporting): 2d, 3; 3d, 1; 5th, 1; 6th, 9; 7th, 3; 10th, 1; 25th, 7; 26th, 1; 28th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for April, 1933

WEST VIRGINIA SECTION

40

ROBERT P. POWELL, Meteorologist

Vol. XLI Parkersburg, W. Va., May, 1933 No. 5

GENERAL SUMMARY

The month was warm and unusually wet, being the second wettest May of State record, and the wettest month since June, 1928. The average monthly rainfall, 6.99 inches was nearly twice the normal. Monthly amounts exceeding 11 inches were reported from three stations. Although the month was unusually warm, the temperature averaging more than 3° above the normal, there were no exceptionally high temperatures. Light frosts were reported from scattered localities of the mountain districts on the 5th, 8th, and 22d. Many thunderstorms occurred and hail was noted at a number of stations. The average number of rainy days for the month, 18, was the greatest of May State record. On account of the continued wet weather during the first half of the month, field operations were practically at a standstill; during the last half, plowing and seeding progressed rapidly, and wheat, oats, potatoes, and pastures were in excellent condition and making good growth. There was considerable local damage by high winds and lightning. On May 1, a severe electrical storm occurred in Raleigh County. The storm was severe near Beckley, where 13 cows were killed by lightning. On May 26, high winds attending a thunderstorm, caused some damage to buildings, silos, and orchards in Greenbrier County, near Lewisburg.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 65.1°, or 3.4° above the May normal. The temperature was above the normal during most of the month with the highest readings occurring generally on the 20th, 24th, and 26th. The highest monthly mean was 70.2° at Williamson, and the lowest, 59.0° at Bayard. The highest temperature was 97° at New Cumberland on the 23d, and the lowest, 34° at Bayard on the 22d, making the monthly range for the State 63°. The greatest daily range was 50° at New Cumberland on the 23d.

PRECIPITATION

The average precipitation for the State, determined from 92 stations, was 6.99 inches, which was 2.98 inches more than the normal. The precipitation was the greatest over the central counties and mountain districts, and least in the southern section and the extreme northeastern counties. The greatest monthly precipitation was 11.36 inches at Buckhannon, and the least, 3.50 inches at Harpers Ferry. The greatest amount in any 24 consecutive hours was 2.62 inches at Logan on the 9-10th. The average number of days with .01 inch or more of precipitation was 18.

HAIL

Hail was reported from stations and on dates as follows: *Light:* Aberdeen, 11th and 21st; Arbovale, 29th; Creston, 20th; Lewisburg, 22d; Marlinton, 15th; Morgantown, 29th; New Cumberland, 20th; Parkersburg, 9th; Pickens, 2d and 16th; Richwood, 6th and 16th; Williamson, 9th. *Moderate:* Bens Run, Bruceton Mills, and Clarksburg, 30th; Huntington, 9th. *Heavy:* Gary, 21st; Ryan, 30th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 22d and 24th; Bens Run, 15th; Creston, 17th and 18th; Elkins, 9th, 18th, and 22d; Huntington, 15th; Pickens, 3d and 10th; Stony River Dam, 8th; Terra Alta, 5th.

Halo, lunar: Pickens, 2d.

Thunderstorms (dates and number of stations reporting): 1st, 9; 2d, 13; 3d, 4; 5th, 7; 6th, 8; 7th, 1; 8th, 2; 9th, 14; 10th, 15; 11th, 19; 12th, 5; 13th, 4; 14th, 5; 15th, 16; 16th, 9; 20th, 19; 21st, 5; 23d, 1; 24th, 10; 25th, 15; 26th, 5; 27th, 11; 28th, 3; 29th, 11; 30th, 10.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on otherdates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1933

ROBERT P. POWELL, Meteorologist

Vol. XLI — Parkersburg, W. Va., June, 1933 — No. 6

GENERAL SUMMARY

The month was warm and exceptionally dry, being the driest June of State record. Unusually high temperatures prevailed nearly continuously from the 3d to the 12th, and from the 20th to the 30th, with maxima of 100 degrees or higher at a number of stations. Cool weather for the season occurred during the second decade, with temperature readings near or slightly below the June record at a few stations. Light to heavy frosts occurred generally on the mornings of the 14th and 15th, the frost damage was confined generally to truck gardens, and was somewhat severe in the mountain districts. The rainfall occurred mostly during thundershowers and was unevenly distributed, monthly amounts ranging from 0.52 inch to 7.08 inches. All crops suffered severely from high temperature and lack of moisture, and at the close of the month potatoes were drying up and pastures and meadows were burned brown. Harvesting of wheat progressed rapidly and was nearing completion at the end of the month, with some threshing. Heavy rains and high winds caused some damage to crops in scattered localities. A violent thunderstorm, attended by heavy hail, occurred at Wheeling on the 5th, the hail caused considerable damage to fruit trees and truck gardens.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 71.4°, or 1.9° above the normal. The excess was general, but was the greatest in the Ohio River counties. The highest monthly mean was 77.0° at Huntington, and the lowest, 63.6° at Alpena. The highest temperature was 104° at Wheeling on the 8th, and the lowest, 28° at Bayard and Terra Alta on the 15th, making the monthly range for the State 76°. The greatest daily range was 50° at Wheeling on the 20th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 2.75 inches, which was 1.62 inches less than the normal. The precipitation was the greatest in the mountain sections, and least in most of the Ohio River counties, and in scattered localities of the central districts. The greatest monthly precipitation was 7.02 inches at Richwood, and the least, 0.52 inch at Benson. The greatest amount in any 24 consecutive hours was 5.64 inches at Point Pleasant on the 25-26th. The average number of days with .01 inch or more of precipitation was 7.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Cabell, 6th and 12th; Clay, 9th; Harrison, 10th; Lewis, 10th; Marion, 4th and 12th; Monongalia, 4th; Nicholas, 9th; Pocahontas, 12th; Preston, 9th and 15th; Randolph, 9th and 30th; Raleigh, 6th; Wirt, 9th and 12th.

HEAVY HAIL

Moderate to heavy hail fell in and near Martinsburg on the 13th, with practically no damage. Heavy hail fell at Terra Alta on the 12th; the stones were about the size of small marbles and caused very little damage. Heavy hail fell at Wheeling on the night of the 5th; the stones ranged in size from 1-4 to 3-4 inch in diameter. Damage was confined mostly to automobile tops, fruit trees, truck gardens, and window panes. Estimated damage was about $5,000. Moderate to heavy hail fell near Elkins and Parsons on the 9th; the stones were about the size of marbles and caused some damage to roofs and truck gardens. Estimated damage was about $1,000.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale 26th, 27th, 29th, and 30th Elkins, 2d, 7th, 9th, 11th, 23d, 28th, and 29th; Fairmont, 15th; Glenville, 2d and 15th; Hinton, 7th and 28th; Marlinton, 1st, 2d, 5th, 7th, 8th, 14th, 15th, 18th to the 25th, 27th and 30th; Rainelle, 14th and 15th.

Halo, solar: Parsons, 15th.

Thunderstorms (dates and number of stations reporting): 3d, 10; 4th, 12; 5th, 7; 6th, 5; 7th, 3; 8th, 8; 9th, 9; 10th, 7; 12th, 14; 13th, 4; 15th, 1 16th, 3; 17th, 5; 22d, 2; 23d, 2; 24th, 4; 25th, 10; 26th, 12; 27th, 8; 28th, 8; 29th, 4; 30th, 9.

PRESSURE, WIND, HUMIDITY, AND SUNSHINE DATA

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for June, 1933

WEST VIRGINIA SECTION

40

ROBERT P. POWELL, Meteorologist

VOL. XLI PARKERSBURG, W. VA., JULY, 1933 No. 7

GENERAL SUMMARY

The month was somewhat cool and sunshiny, with the rainfall well above the July average. This was the coolest July since 1927. The rainfall varied considerably over the section, being generally in the form of thundershowers. Cool weather for the season prevailed on the 4th, with light frosts in some of the mountain districts. The highest temperatures occurred on the 1st and 23d, with readings near or slightly above 100 degrees. Lightning caused some damage in scattered localities of Wood County on the 24th. The weather was mostly favorable for growth and farm work. At the close of the month, corn was generally in good condition and much of the early planted laid by; potatoes were being dug with yield considerably below the average; wheat, hay, and oats were harvested with yields averaging from fair to poor. High winds prevailed on the 1st with practically no damage.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 72.6° or 0.4° below the normal. The temperature was above the average on the 1st, 20th to the 24th, and from the 29th to the 31st, with the highest readings occurring generally on the 23d. Cool weather prevailed from the 2d to the 12th, and from the 14th to the 18th, with the lowest temperatures on the 4th. The highest monthly mean was 77.4° at Huntington, and the lowest, 65.2° at Alpena. The highest temperature was 104° at New Martinsville on the 23d, and the lowest, 36° at Alpena and Bayard on the 4th, making the monthly range for the State 68°. The greatest daily range was 50° at Parsons.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 5.21 inches, which was 0.64 inch more than the normal. Most of the precipitation was received from the 1st to the 3d, 9th to the 11th, 15th and 16th, and from the 24th to the 28th. The greatest monthly precipitation was 8.52 inches at Crawford, and the least, 1.94 inches at Ravenswood. The greatest amount in any 24 consecutive hours was 4.34 inches at Wardensville on the 3d. The average number of days with .01 inch or more of precipitation was 10.

LIGHT HAIL

Light hail fell at Arbovale, Pocahontas County, on the 21st, doing no damage.

HEAVY HAIL

Heavy hail fell over the north-central sections of Brooke County, on the 24th at 2:30 p. m. The stones averaged about 3-4 inch in diameter. Width of storm path about one mile; length unknown. Damage was confined mostly to crops. Estimated loss was about $1,100.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 14th; Bens Run, 5th, 6th, 17th, 19th, 20th, 21st, 22d, and 25th; Elkins, 4th, 6th, 8th, 12th, 18th, and 20th; Hinton, 17th, 21st, 29th, and 31st; Marlinton, 4th to the 8th, 11th, 13th, 14th, 17th, 19th, 21st, 22d, 23d, 25th, and 29th; Morgantown, 17th; New Cumberland, 20th; Parkersburg, 7th.

Thunderstorms (dates and number of stations reporting): 1st, 19; 2d, 22; 3d, 12; 9th, 3; 10th, 5; 11th, 2; 14th, 1; 15th, 11; 16th, 10; 20th, 4; 21st, 1; 23d, 4; 24th, 15; 25th, 3; 26th, 1; 27th, 2; 30th, 1; 31st, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters. ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1933

WEST VIRGINIA SECTION

R. P. POWELL

Vol. XLI   Parkersburg, W. Va., August, 1933   No. 8

GENERAL SUMMARY

August averaged practically normal in temperature, the month being divided into short periods of moderately warm and moderately cool weather. The warmest weather over most of the State occurred on the 1st and 26th, while the coolest periods were on the 6th and 30th. Showers occurred frequently and were well distributed throughout the State. Only a few stations reported amounts for the month less than the normal. This was the sixth wettest August of State record. Heavy to excessive showers occurred in scattered localities on the 2d, 4th, 11th, 23d, and 24th. Heavy rains in sections of Jackson, Roane, and Wood counties on the 2d, caused serious floods in the smaller streams, resulting in considerable damage to highways and crops. The high winds and heavy rains attending the Atlantic coast storm of the 23d, caused much damage to crops in the northeastern sections. The month was favorable for crop growth and farm work. Threshing of wheat and oats progressed rapidly, with fair to poor yields. Early planted corn was in good condition and ripening rapidly, and at the close of the month cutting was in progress. Early planted potatoes were being dug with poor yields, many fields were a complete failure. Pastures and meadows were in excellent condition.

TEMPERATURE

The monthly mean for the State, determined from 56 stations, was 71.5° or 0.1° below the normal. The temperature was below the normal from the 4th to the 8th, 15th to the 20th, 22d and 23d, and from the 28th to the 31st, with the lowest readings generally on the 30th. Warm weather prevailed from the 1st to the 3d, 11th to the 13th, and from the 24th to the 27th, with the highest temperatures on the 1st. The highest monthly mean was 75.8° at Huntington, and the lowest, 64.3° at Alpena. The highest temperature was 102° at Martinsburg on the 1st, and the lowest, 38° at Bayard on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 91 stations, was 5.38 inches, which was 1.39 inch more than the normal The greatest monthly precipitation was 9.84 inches at Dam No. 19, Ohio River, and the least was 1.28 inches at Sharples. The greatest amount in any 24 consecutive hours was 4.05 inches at McNeill on the 23d. The average number of days with .01 inch or more of precipitation was 11.

LIGHT HAIL

Light hail fell in sections of Raleigh County, near Beckley, on the 2d, doing practically no damage.

HEAVY HAIL

Heavy hail fell over the southern sections of Berkeley County on the 28th. No other details were obtainable.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 13th, 17th, 25th, and 28th; Bens Run, 15th, 25th, 26th, 27th, and 30th; Brandywine, 5th and 30th; Elkins, 1st, 4th, 6th, 7th, 13th, 14th, 19th, 20th, 25th, 26th, 28th, and 30th; Fairmont, 4th and 5th; Hinton, 1st, 12th, 15th, 17th, 19th, 25th, 26th, and 28th; Huntington, 9th; Mannington, 5th, 6th, 15th, 17th, and 26th to the 30th; Marlinton, 1st, 3d to the 7th, 12th, 13th, 15th, 17th, 21st, 26th, 27th, and 30th; Parkersburg, 15th and 19th; Pickens, 4th, 23d, and 24th; Wellsburg, 29th and 30th.

Aurora: Elkins, 1st.

Thunderstorms (dates and number of stations reporting): 1st, 5; 2d, 10; 3d, 5; 4th, 5; 9th, 1; 10th, 5; 11th, 3; 13th, 4; 14th, 3; 16th, 2; 17th, 1; 18th, 2; 19th, 2; 22d, 1; 23d, 1; 24th, 1; 27th, 1; 28th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries.
Reference letters, a, b, c appearing in the table indicate number of missing days; for example, b represents two days, etc.

Daily Precipitation for August, 1933

R.

Vol. XLI PARKERSBURG, W. VA., SEPTEMBER, 1933 No. 9

GENERAL SUMMARY

The month was almost continuously warm, being the warmest September since 1925, and the fourth warmest of State record. Every station in the State showed an excess in temperature, the greatest in the central and southern sections. While the month was much wetter than usual, averaging nearly one inch above the normal, there were a number of stations in the southern section having monthly amounts considerable less than the average. This was the sixth month of the year with an excess of temperature, and the seventh with an excess in precipitation. Light frosts were reported from scattered localities in Greenbrier County on the 19th, and Grant County on the 30th. The month was unusually favorable for harvesting, threshing, and fall plowing. At the close of the month, corn cutting was progressing rapidly, and many fields were in shock; late potatoes were being dug with yields fair to good; buckwheat harvest was in progress; apple-picking was nearing completion, and fall plowing and seeding was somewhat general.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 70.3 or 3.9° above the normal. Moderately high temperatures prevailed from the 6th to the 9th, 11th to the 14th, and from the 23d to the 28th, with the highest readings generally on the 8th, 9th, and 25th. The temperature was somewhat low on the 2d, 19th, 22d, and 30th. The highest monthly mean was 75.3° at Huntington, and the lowest, 63.8° at Alpena. The highest temperature was 98° at New Martinsville on the 8th, and at Union on the 9th and 13th, and the lowest was 35° at Bayard on the 30th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 3.71 inches, which was 0.81 inch more than the normal. Most of the precipitation was received from the 3d to the 5th, 13th to the 15th, 20th, and from the 26th to the 29th. The greatest monthly precipitation was 6.81 inches at Davis, and the least, 0.67 inch at Union. The greatest amount in any 24 consecutive hours was 2.91 inches at Richwood on the 15-16th. The average number of days with .01 inch or more of precipitation was 10.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 9th; Bancroft, 6th, 7th, 9th, 10th, 16th, and 22d; Bens Run, 6th, 8th, 9th, 23d, 24th, 29th, and 30th; Cairo, 30th; Charlestón, 2d, 19th, and 22d; Elkins, 2d, 6th, 8th, 9th, 13th, 25th, 29th, and 30th; Fairmont, 4th and 5th; Hinton, 1st, 2d, 5th, 6th, 8th, 11th, 12th, 14th, 19th, 22d, and 25th; Huntington, 2d, 6th, 7th, 12th, 15th, 16th, and 30th; Marlinton, 5th to the 10th, 12th, 16th, 18th, and from the 23d to the 29th; Morgantown, 29th and 30th; New Cumberland, 1st, 2d, 3d, 6th, 7th, 25th, 26th, 29th, and

MISCELLANEOUS PHENOMENA (Continued)

30th; Parkersburg, 22d and 29th; Rainelle, 8th; Spencer, 11th; Wardensville, 15th; Wellsburg, 1st, 6th, and 30th; Williamson, 8th, 9th, and 22d.

Halo, solar: Elkins, 28th.

Thunderstorms (dates and number of stations reporting): 3d, 4; 4th, 6; 9th, 1; 11th, 2; 12th, 4; 13th, 8; 14th, 9; 15th, 1; 17th, 2; 19th, 3; 20th, 8; 27th, 5; 29th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record. but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for September, 1933

VOL. XLI PARKERSBURG, W. VA., OCTOBER, 1933 No. 10

GENERAL SUMMARY

October was an unusually pleasant month, with mild temperature, light precipitation, and a large percentage of sunshine. The temperature was somewhat below the normal in all sections, as there were only a few stations having positive departures. There were well-marked periods of high and low temperature. The precipitation was unusually light, practically every station reported monthly amounts much below the normal. There were a number of stations having from 12 to 15 days without measurable precipitation. Snow flurries were noted on the 25th in scattered localities of the State. Conditions were favorable for outdoor work and for maturing late crops, as killing frosts were not general in most of the agricultural districts until the 26th, about 14 days later than usual. At the close of the month, corn husking was general; wheat was in good condition and making fair growth, and pastures and meadows were green. The apple crop was secured under favorable weather conditions.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 53.6° or 1.0° below the normal. The temperature was above the normal on the 1st, 16th, 20th to the 22d, and considerably above from the 27th to the close of the month, with the highest readings occurring generally on the 1st. Cool weather prevailed from the 2d to the 10th, 14th and 15th, 17th to the 19th, and 25th and 26th, with the lowest temperature on the 26th. The highest monthly mean was 58.0° at Huntington, and the lowest, 46.8° at Marlinton. The highest temperature was 91° at McNeill on the 1st, and the lowest was 13° at Parsons on the 26th.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 1.67 inches, which was 1.15 inches less than the normal. The greatest monthly amounts were received in the mountain sections, and the least in the Ohio River counties and in scattered localities of the eastern section. Most of the precipitation was received on the 1st and 2d, 8th to the 10th, 12th and 13th, 17th, and from the 22d to the 24th. Snow flurries occurred on the 25th in the northern Ohio River counties and mountain districts. The greatest monthly precipitation was 4.31 inches at Pickens, and the least, 0.40 inch at Upper Tract. The greatest amount in any 24 consecutive hours was 1.95 inches at Kayford on the 23d. The average number of days with .01 inch or more of precipitation was 6.

LIGHT HAIL

Light hail, doing practically no damage, was noted in the following counties on the dates given: Cabell, 8th; Raleigh, 12th, and Monongalia, 18th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Aberdeen, 1st; Alpena, 2d; Arbovale, 5th, 7th, 8th, and 14th; Bancroft, 8th, 9th, 11th, and from the 15th to the 23d; Bens Run, 6th, 8th, 15th, 21st, 30th, and 31st; Charleston, 6th, 9th, 11th, 15th, 21st, and 30th; Creston, 12th and 14th; Elkins, 2d, 3d, 6th, 7th, 11th, 14th, 15th, 19th, 29th, and 31st; Glenville, 1st to the 8th, 13th, 15th, 19th, 26th, and 31st; Grafton, 6th and 31st; Hinton, 6th, 7th, 11th, 14th, 19th, 30th, and 31st; Huntington, 6th, 7th, 11th, 19th, and 31st; Kanawha Falls, 5th, 11th, 15th; McNeill, 3d, 6th, 7th, 11th, 15th, and 21st; Morgantown, 2d, 8th, and 31st; New Cumberland, 19th and 31st; Parkersburg, 6th and 7th; Wardensville, 4th, 7th, and 14th; Wellsburg, 2d, 4th, 6th, and 23d; Williamson, 3d, 6th, 11th, 14th, 19th, 28th, 30th, and 31st; Wheeling, 2d, 4th, 6th, 7th, 8th, 12th to the 16th, 19th, 21st, 24th, 29th, 30th, and 31st.

Halos, lunar: Parkersburg 1st and 28th.

Thunderstorms (dates and number of stations reporting): 1st, 6; 2d, 2; 8th, 4; 12th, 2; 22d, 3; 23d, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for October, 1933

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

R. P. POWELL

Vol. XLI Parkersburg, W. Va., November, 1933 No. 11

GENERAL SUMMARY

November was marked by frequent and decided changes in temperature and heavy snowfall. The first two days of the month were exceptionally warm, the highest temperatures of November record were noted at a number of stations. From the 15th to the 17th, a severe cold spell covered the State with temperature readings near or slightly below the record for so early in the season. A low reading of 5 degrees below zero was recorded at Alpena on the 17th. The precipitation was deficient in all sections, and fell mostly during the first half of the month. The first general snow of the season occurred on the 8th, the amounts being moderately heavy in the mountain districts. The average snowfall for the month, 6.6 inches, was the second heaviest of November State record. The month was unfavorable for out-door work. During the cold weather, wheat was well protected by snow cover and at the close of the month was mostly in good condition. A dust storm prevailed throughout the State on the morning of the 13th.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 41.4° or 1.8° below the normal. The temperature was much above the average from the 1st to the 3d, 20th to the 22d, and from the 28th to the close of the month. Unusually cold weather prevailed from the 8th to the 10th, and from the 14th to the 17th, with the lowest temperatures occurring generally on the 17th. The highest monthly mean was 45.6° at Huntington, and the lowest, 35.3° at Marlinton. The highest temperature was 88° at Robertsburg on the 1st, and the lowest was 5° below zero at Alpena on the 17th, making the monthly range for the State 93°.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 1.98 inches, which was 0.77 inch less than the normal. The precipitation was somewhat heavy over the north-central counties and mountain districts, and unusually light in the eastern sections and Ohio River counties. Most of the precipitation was measured on the 5-8th, 14-15th, 22-23d, and 26-27th, the greatest amounts being noted on the 5-8th, and 14th. The heaviest monthly snowfall in inches was as follows: Alpena, 24.5; Davis, 34.5; Pickens, 28.5; Thomas, 20.0, and Stony River Dam, 24.0. The greatest monthly precipitation was 5.98 inches at Pickens, and the least, 0.52 inch at Upper Tract. The greatest amount in any 24 consecutive hours was 2.00 inches at Sharples on the 6th. The average number of days with .01 inch or more of precipitation was 11.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 6th; Charleston, 1st and 25th; Bens Run, 1st; Elkins, 1st; Hinton, 1st, 18th, 20th, 25th, 26th, 28th, and 29th; Huntington, 18th; Marlinton, 1st; New Cumberland, 1st and 2d; Pickens, 4th, 6th, 7th, 13th, 18th, 23d, and 30th; Williamson, 1st, 19th, and 25th.

Halos, lunar: Elkins and Parkersburg, 1st.

Sleet: Elkins and Parkersburg, 7th; Bens Run, 9th; Bens Run, Marlinton, Martinsburg, Morgantown, McNeill, Romney, and Wellsburg, 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Vol. XLI   Parkersburg, W. Va., December, 1933   No. 12

GENERAL SUMMARY

December was considerably warmer and somewhat wetter than usual, with about the normal amount of sunshine. Although the precipitation was in excess, the snowfall was below the normal. The month was characterized by long periods of moderately warm weather, the highest and lowest temperatures being well within previous December records. A severe cold wave covered the State on the 27th and 28th, with temperature readings near or somewhat below zero in practically all sections. Heavy rains fell generally in the central and northern counties on the the 16-17th, being unusually heavy over the Little Kanawha Valley. Small streams were at a bankful stage on the 20th and 21st. On the 13th, light rain froze as it fell, and streets, roads, and exposed objects were covered by an ice-coating, making travel difficult and dangerous. The ice-coating was not heavy enough to damage fruit and shade trees, or telephone and telegraph wires. The weather conditions were generally favorable for winter grains and outdoor work. Stock remained in the open practically the entire month. Moderately heavy hail fell at Parkersburg on the 20th; the stones were about the size of a pea, and caused no damage.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 38.7° or 4.0° above the normal. The temperature was decidedly above the normal from the 3d to the 6th, 15th to the 24th, and on the 31st, with the highest readings occurring generally on the 5th, 17th, and 24th. The coldest weather prevailed from the 10th to the 14th, and from the 26th to the 30th, the lowest temperature being noted on the 27th and 28th. The highest monthly mean was 43.8° at Williamson, and the lowest, 33.6° at Marlinton. The highest temperature was 78° at Charleston on the 17th, and the lowest was 5° below zero at Cairo, Lost Creek, and Mannington, on the 27th, and Bayard on the 28th.

PRECIPITATION

The average precipitation for the State, determined from 92 stations, was 4.10 inches, which was 0.74 inch more than the normal. The greater portion of the precipitation was received on the 3d-6th, 11th, 15-20th, and 25-27th, the greatest amounts being measured on the 16th, 17th, and 20th. Most of the snowfall was received on the 9th, 10th, 26th, and 27th. The greatest monthly precipitation was 6.15 inches at Sutton, and the least was 0.87 inch at Upper Tract. The greatest amount in any 24 consecutive hours was 1.87 inches at Bruceton Mills on the 17th. The greatest monthly snowfall was 15.0 inches at Pickens. The average number of days with .01 inch or more of precipitation was 12.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 5th and 15th; Elkins, 1st; Grafton, 5th, 7th, and 8th; Hinton, 5th, 8th, 17th, 18th, 22d, and 23d; Huntington, 2d, 13th, 16th, 18th, 19th, 28th, and 31st; Kearneysville, 17th and 20th; Lewisburg, 4th; Marlinton, 3d, 5th, 15th, 16th, and 20th; New Cumberland, 3d and 24th; Pickens, 5th, 9th, and 10th; Wellsburg, 5th; Williamson, 17th and 20th.

MISCELLANEOUS PHENOMENA (Continued)

Halos, lunar: Elkins and Parsons, 1st; Parkersburg, 2d.

Sleet: Glenville, 5th; Bens Run, Brownsville, Bruceton Mills, Crawford, Grafton, Lost Creek, Martinsburg, Morgantown, Roanoke, and Valley Chapel, 13th; Bruceton Mills, Cairo, Creston, Davis, and Lost Creek, 14th; Beckley, 26th.

Thunderstorms: Williamson, 6th; New Cumberland and Wellsburg, 4th and 15th; Roanoke and Wellsburg, 16th; Bancroft, Roanoke, and Ryan, 20th; Bens Run, Fairmont, Morgantown, New Cumberland, and Parkersburg, 24th; Alma, Mannington, and Wellsburg, 25th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for December, 1933

Vol. XLI PARKERSBURG, W. VA., YEAR, 1933 No. 13

GENERAL SUMMARY

The weather during the year 1933 was warmer and wetter than usual, with about the normal amount of sunshine. The snowfall averaged considerably below the normal.

January was unusually warm, and the temperature was well above the normal in February. The spring months were mostly warm, and the temperature also averaged above the normal in September and December. March was cold; July, August, October, and November were cooler than usual.

In general, the summer and winter periods were somewhat wetter than usual, while March and September averaged considerably above the normal The precipitation was deficient in February, June, October, and November. The heavy rains of March caused a serious flood in the Ohio River

Owing to frequent rains, the spring months were generally unfavorable for farming operations, and plowing and planting were considerably retarded The season of growth was ample for ripening of all crops, extending from the latter part of April to the last week in October

The sunshine at Parkersburg averaged 50 per cent. of the possible amount, or 4 per cent. above the normal. For Elkins, the average was 48 per cent., or 3 per cent. above the normal.

The wind movement for Parkersburg was 56,120 miles, and at Elkins 55,634 miles.

THE WEATHER BY MONTHS

JANUARY.—The month was unusually warm, being the third warmest of January State record. Zero temperatures were not recorded in any section of the State. The precipitation averaged slightly above the normal in practically all sections. The snowfall was the second lightest of January State record. Stock remained in the open practically the entire month.

FEBRUARY.—The month was warm and somewhat dry. Zero temperatures prevailed throughout the State on the 6th, 9th, and 12th. The snowfall was mostly light and unimportant. On account of moderately heavy floating ice, navigation was interrupted or suspended on the Ohio River from the 10th to the 16th.

MARCH.—A cold, wet month. The average precipitation, 5.92 inches, was nearly twice the normal. Monthly amounts exceeding nine inches were reported from the mountain districts. Temperatures near or slightly above zero were recorded generally on the mornings of the 6th and 11th. While the snowfall was somewhat below the normal, heavy amounts were reported from scattered localities of the mountain districts. Flood stages prevailed in the Ohio River from the 15th to the 25th.

APRIL.—The month was warmer and wetter than usual. Freezing temperatures and heavy to killing frosts occurred generally on the 23d and 24th, causing slight damage to peach, cherry, and plum bloom. Owing to frequent rains, the month was unfavorable for farm work, and plowing was considerably retarded, and at the close of the month was about three weeks behind the average.

MAY.—A warm, wet month. This was the wettest month since June, 1928. Monthly amounts exceeding 11 inches were reported from three stations. Many thunderstorms occurred and light hail was noted at a number of stations. The average number of rainy days, 18, was the greatest of May State record. On account of the continued wet weather during the first half of the month, field operations were practically at a standstill; during the last half, plowing and seeding progressed rapidly.

JUNE.—The month was warm and exceptionally dry, being the driest June of State record. Light to heavy frosts occurred on the mornings of the 14th and 15th, the frost damage was confined generally to truck gardens. All crops suffered severely from high temperature and lack of moisture. Heavy rains, high winds, and hail, caused some damage in scattered localities.

JULY.—A cool month. The precipitation averaged well above the normal. Maximum temperatures near or slightly above 100 degrees occurred generally on the 1st and 23d. The weather was mostly favorable for growth and farm work. Hail and high winds caused slight damage in some sections.

AUGUST.—Temperatures were seasonable. Showers occurred frequently and were well distributed throughout the State. Only a few stations reported amounts for the month less than the normal. This was the sixth wettest August of State record. Heavy to excessive rains caused considerable damage to crops and highways in scattered localities. The month was favorable for farm work, and threshing of wheat and oats progressed rapidly, with fair to poor yields. Potatoes were being dug with poor yields, many fields were a complete failure.

SEPTEMBER.—A warm, wet month. This was the sixth month of the year with an excess of temperature and the seventh with an excess in precipitation. Light frosts occurred in scattered districts on the 19th and 30th. The month was unusually favorable for harvesting, threshing, and fall plowing.

OCTOBER.—The month was somewhat cold and unusually dry, with a large percentage of sunshine. There were well-marked periods of high and low temperatures. Snow flurries occurred on the 25th in scattered localities. The first general killing frost of the season occurred on the 26th, about 14 days later than usual. The month was favorable for outdoor work.

NOVEMBER.—The month was marked by frequent and decided changes in temperature and heavy snowfall. From the 15th to the 17th, a severe cold spell covered the State with temperature readings near or slightly below the record for so early in the season in practically all sections. The average snowfall was the second heaviest of November State record.

DECEMBER.—The month was unusually warm and wet. Every station in the State had more than the normal amount of precipitation. The snowfall was light and averaged much below the normal. A severe cold wave prevailed on the 27-28th, with temperature readings near or somewhat below zero. Weather conditions were generally favorable for winter grains and outdoor work.

ERRATUM

Correct Monthly Climatological Data for February 1933, New Cumberland, monthly snowfall to 4.0 inches.

R. P. POWELL

Vol. XLII PARKERSBURG, W. VA., JANUARY, 1934 No. 1

GENERAL SUMMARY

The month was warmer and drier than normal, with more than the usual amount of sunshine. This was the fifth consecutive warm January. The temperature was continuously above the normal, except for a few short periods. A severe cold wave swept over the State on the evening of the 28th, and on the morning of the 29th, temperature readings ranged from zero to 15 degrees below in practically all sections. A fall in temperature of 51 degrees occurred at Parkersburg in 20 hours. Although the precipitation averaged well below the normal, an excess was noted at a few mountain stations. Monthly total ranged from 0.54 inch in the extreme southern section to 6.98 inches in the northern section. The average snowfall was considerably below the normal, and fell mostly on the 14th and 29th. The favorable weather permitted outdoor activities during the greater part of the month. Navigation on the Ohio River was interrupted on the 5th and 31st, by moderately heavy ice. At the close of the month, winter wheat and other winter crops were generally in satisfactory condition.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 36.7° or 4.2° above the normal. The temperature was above the normal from the 4th to the 9th, and from the 13th to the 28th, with the highest readings occurring generally on the 7th and 25th. Moderately cold weather prevailed on the 2d, 10th, 11th, and unusually cold weather from the 29th to the 31st. The lowest temperatures being noted on the 29th and 30th. The highest monthly mean temperature was 42.0° at Huntington, and the lowest was 30.6° at Marlinton. The highest temperature was 71° at Bancroft on the 7th, and the lowest, 15° below zero at Bayard on the 29th, making the monthly range for the State 86°. The greatest daily range was 58° at Wheeling.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 2.75 inches, which was 0.87 inch less than the normal. The greater portion of the precipitation was received on the 5-9th, 12-15th, 22d-24th, and the 26-29th, the greatest amounts being measured on the 7th and 23d. The average snowfall for the State, 1.6 inches, was 6.2 inches less than the normal. The greatest monthly precipitation was 6.98 inches at Davis, and the least was 0.54 inch at Union. The greatest amount in any 24 consecutive hours was 1.78 inches at Weston on the 7th. The average number of days with .01 inch or more of precipitation was 11.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 8th; Arbovale, 3d and 4th; Elkins, 3d; Hinton, 6th, 11th, 13th, and 20th; Huntington, 4th, 6th, 24th, and 25th; Marlinton, 3d, 6th, and 7th; McNeill, 3d and 7th; Pickens, 8th; Stony River Dam, 4th; Terra Alta, 1st; Valley Chappel, 3d.

MISCELLANEOUS PHENOMENA (Continued)

Corona, lunar: Huntington, 28th.

Hail: Pickens, 1st.

Halo, lunar: Elkins, 31st.

Sleet: Pickens, 2d; Bayard, Buckhannon, Elkins, Horton, Parkersburg, and Parsons, 13th; Marlinton, 22d; Elkins, 28th; Horton and Richwood, 29th.

Thunderstorms: Alma, Beckley, Clarksburg, Fairmont, Morgantown, Parkersburg, Pickens, and Valley Chappel, 1st; Aberdeen, and Crawford, 7th; Huntington, 22d; Crawford and Roanoke, 23d.

VOL. XLII   PARKERSBURG, W. VA., FEBRUARY, 1934   NO. 2

GENERAL SUMMARY

This was the coldest February since 1895, and the second coldest of February State record. The most unusual feature of the weather during the month, was the continuously low temperatures, the morning readings were below freezing on every day, and at some stations the monthly means were the lowest of February record. The lowest temperatures were recorded generally on the 9th and 28th, reaching 26° below zero at Wellsburg, 25° below at Bayard and Lost Creek, and 24° below at Mannington. Practically every station in the State recorded temperatures below zero on from three to seven days. There were only four warm days, the 1st, 4th, 15th, and 18th. The precipitation was unusually light and fell mostly in the form of snow. This was the driest February since 1919. The snowfall was heavy, and ranged in amounts from 51.0 inches in the mountain districts to 6.0 inches in the extreme northeastern section. Navigable streams of the State were frozen during the the severe cold periods, and navigation was suspended during the greater part of the month. Winter grains were well protected by a good snow cover, and little damage resulted from the cold weather. Fruits were reported seriously injured by the unusually low temperatures. Little outdoor work was accomplished during the month.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 24.0° or 9.2° below the normal. Unusually low temperatures prevailed on the 9-10th, 20th, and 27-28th, the lowest readings occurring generally on the 27-28th. The temperature was somewhat above the normal on the 1st, 4th, 15th, and 18th, with the highest temperatures on the 15th and 18th. The highest monthly mean temperature was 29.6° at Williamson, and the lowest was 17.8° at New Cumberland and Wheeling. The highest temperature was 65° at Creston on the 18th, and the lowest, 26° below zero at Wellsburg on the 27th, making the monthly range for the State 92°. The greatest daily range was 63° at Bayard on the 28th.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 1.86 inches, which was 1.28 inches less than the normal. The precipitation occurred mostly in the form of snow and fell generally on the 1st-3d, 11-13th, 19-20th, and the 25-28th, the greatest amounts being noted on the 26th and 28th. The snowfall was unusually heavy, being the fourth heaviest of February State record. The greatest monthly precipitation was 4.25 inches at Pickens, and the least, 0.75 inch at New Cumberland. The greatest amount in any 24 consecutive hours was 2.62 inches at Gary on the 26th. The snowfall averaged 17.6 inches, which was 9.0 inehes more than the normal. The greatest monthly snowfall was 51.0 inches at Pickens, and the greatest 24 hour fall was 19.0 inches at Union on the 26th. The average number of days with .01 inch or more of precipitation was 9.

MISCELLANEOUS PHENOMENA

Fogs, dense: Huntington, 3d and 12th; Wheeling, 27th.

Halos, lunar: Elkins, 1st; Parkersburg and Parsons, 21st; Alpena, 28th.

Sleet: Elkins, 9th; Richwood, 23d; Arbovale, Beckley, Elkins, Glenville, Huntington, Marlinton, and Ryan, 25th; Beckley, Crawford, Roanoke, and Ryan, 26th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for February, 1934

VOL. XLII PARKERSBURG, W. VA., MARCH, 1934 No. 3

GENERAL SUMMARY

The month was considerably colder and somewhat wetter than usual, with a large number of rainy days. This was the third consecutive March with the precipitation averaging much above the normal. Unusually low temperatures prevailed on the mornings of the 1st and 12th, the readings were near or somewhat below zero at practically all stations. The warmest weather occurred during the second decade, with the highest temperatures occurring generally on the 17th, although in some of the mountain districts and extreme southern section, they were noted on the 21st or 30th. Precipitation occurred frequently during the first decade with thunderstorms on several days, the amounts were heavy in most districts of the southern section, resulting in near flood stages in the Great Kanawha River, and a slight flood in the Ohio at Pt. Pleasant. The snowfall averaged much above the normal, and was heavy in scattered localities of the mountain districts. Weather conditions during the month were unfavorable for most farming operations. Extreme cold weather, with ground frozen in many counties, made plowing practically impossible. The planting of early potatoes and vegetable crops was about two weeks late. Winter grains were reported in fair to good condition.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 38.9° or 3.4° below the March normal. The temperatures were continuously below the normal, except for a few short periods. Mild weather for the season prevailed on a few days during the second and third decades. The highest monthly mean temperature was 43.3° at Charleston, and the lowest, 33.1° at New Cumberland. The highest temperature was 80° at Charleston on the 17th, and the lowest was 18° below zero at Clarksburg on the 1st, making the monthly range for the State, 98°.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 4.26 inches, which was 0.38 inch above the normal. The precipitation was the heaviest over the extreme southern and central sections, and lightest in the eastern counties. Precipitation was general from the 2d to the 11th, 14th, 18th, and from the 23d to the 28th, the greatest amounts being measured on the 3d, 8th, and 27th. Light to moderate snow fell during the first half of the month, and on the 23d and 24th. The greatest monthly precipitation was 8.09 inches at Beckley, and the least was 1.42 inches at Upper Tract. The greatest monthly snowfall was 29.0 inches at Sutton. The greatest amount of precipitation in any 24 consecutive hours was 2.00 inches at Brownsville on the 7th. The average number of days with .01 inch or more of precipitation was 15.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 3d and 4th; Bancroft, 5th; Beckley, 18th and 22d; Bruceton Mills, Creston, and Fairmont, 3d; Hinton, 5th; Huntington, 29th and 30th; Mannington, 3d and 4th; Marlinton, 1st and 3d; Morgantown, 3d and 4th; New Cumberland, 1st and 3d; Parkersburg, 3d, 4th, and 25th; Parsons, 3d and 4th; Pickens, 14th, 18th, 22d, 24th, 27th, and 28th; Piedmont, 3d and 4th; Spencer, 3d and 5th; Williamson, 29th.

Hail, light: Beckley, Elkins, Glenville, Huntington, and Parkersburg, 5th; New Cumberland, 19th.

Halos, lunar: Huntington and Pickens, 1st; Elkins, 25th; Elkins, Parkersburg, Parsons, and Wellsburg, 26th.

Thunderstorms (dates and number of stations reporting): 4th, 1; 5th, 16; 6th, 2; 7th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for March, 1934

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

40

JUN 28 1934

R. P. POWELL

VOL. XLII PARKERSBURG, W. VA., APRIL, 1934 No. 4

GENERAL SUMMARY

The outstanding feature of the weather during the month was the severe cool spell that prevailed over the State during the last week, the temperatures were considerably below freezing, with the lowest readings of record for so late in the season. A low temperature of 18° was noted at Benson and McNeill on the morning of the 28th. The month was warmer than usual, most of the warm weather occurred during the first 10 days. Freezing temperatures and killing frosts occurred frequently during the last decade, causing great damage to fruit bloom and truck gardens. The precipitation averaged much below the normal, except in a few small areas. The snowfall was lighter than usual, and fell mostly on the 12th and 13th, the greatest amounts being in sections of the mountain districts. Farm work at the close of the month was about two weeks late. The greater part of the spring plowing was completed and some oats were sown and potatoes and corn planted. Drought conditions have made crop prospects somewhat uncertain, and the soil has been too dry for the proper germination of oats and corn.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 52.8° or 1.0° above the normal. Warm weather prevailed during the first 10 days, and on the 15-16th, 18-19th, 23d, and 30th, the highest readings occurring generally on the 3d, 4th, and 6th. The temperature was below the normal on the 11-14th, 20th-22d, and 24-29th, the lowest temperatures being noted on the 26th and 28th. The highest monthly mean temperature was 57.9° at Huntington, and the lowest, 48.2° at Marlinton. The highest temperature was 91° at Charleston on the 4th, and the lowest was 18° at Benson and McNeill on the 28th, making the monthly range for the State 73°. The greatest daily range was 55° at Brandywine on the 26th.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 2.58 inches, which was 0.93 inch less than the normal. The precipitation was the greatest over the mountain districts and in scattered localities of the southern section, and least along the southern Ohio River counties and in a few districts of the northeastern section. Precipitation fell generally over the State on the 4-7th, 10-14th, 16-17th, 19th, and 27th, and scattered showers on the 1st, 9th, 18th, and from the 20th to 22d, the greatest amounts being measured on the 4th, 11th, and 27th. The snowfall averaged 1.2 inches, which was 0.7 inch below the normal. Light to moderate snow fell on the 12th and 13th, and scattered snow flurries on the 20th, 21st, and 26th. The greatest monthly precipitation was 4.93 inches at Davis, and the least, 0.80 inch at Upper Tract. The greatest amount of precipitation in any 24 consecutive hours was 2 12 inches at Wellsburg on the 4th. The average number of days with .01 inch or more of precipitation was 11.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Berkeley, 12th; Brooke, 4th; Cabell, 18th; Grant, 11th; Hardy, 20th; Hancock, 4th; Lewis, 11th, 26th, and 28th; Logan, 4th; Marion, 4th and 11th; Mingo, 20th; Monongalia, 4th and 10th; Roane, 12th and 13th; Taylor, 11th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 5th and 10th; Dam No. 26, 1st; Elkins, 8th and 18th; Glenville, 5th and 8th; Hinton, 10th; Wellsburg, 17th; Williamson, 1st.

Dust: A light to moderate dust storm prevailed over the State during the morning and early afternoon of the 24th.

Thunderstorms (dates and number of stations reporting): 1st, 2; 3d, 3; 4th, 29; 5th, 4; 6th, 2; 7th, 2; 10th, 8; 11th, 9; 12th, 2; 13, 1; 18th, 1; 19th, 4; 20th, 1; 25th, 1.

ERRATUM

Correct Monthly Climatological Data for March, 1934— Page 10, Bancroft, make monthly mean temperature 42.8°, departure −1.0°.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for April, 1934

R. P. POWELL

VOL. XLII PARKERSBURG, W. VA., MAY, 1934 No. 5

GENERAL SUMMARY

The past month was unusually dry, being the driest May since 1914, and the third driest of May State record. The average State rainfall, 2.08 inches, was about one half of the normal. The outstanding dry Mays were in 1911 and 1914, when the averages were 1.46 and 1.96 inches, respectively. The rainfall occurred mostly in the form of thundershowers and was unfavorably distributed, there were stations having from 12 to 15 consecutive days without measurable amounts. While the temperature averaged considerably above the normal, the month was not free from cool periods, as freezing temperatures and heavy frosts were reported from many districts on four or five days. The warmest weather prevailed generally on the 21st, the maximum readings being above 90° at practically all stations. Moderate dust storms prevailed over the State on the 7th and 11th. All crops suffered severely from high temperature and lack of moisture. At the close of the month, pastures and meadows were drying up and wheat and oats were heading, but the heads were not well filled. Frosts occurred during the second decade of the month in the central, western, and northern portions of the State, damaging fruit crops, gardens, and other vegetation.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 63.1° or 1.4° above the normal. The temperature was above the normal during most of the month, with the highest readings occurring generally on the 20th, 21st, and 30th. The highest monthly mean was 68.1° at Huntington, and the lowest, 56.0° at Alpena. The highest temperature was 100° at Martinsburg on the 20th, and Fairmont on the 21st, and the lowest, 27° at Bayard on the 26th, making the monthly range for the State 73°. The greatest daily range was 53° at Lost Creek on the 7th.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 2.08 inches, which was 1.89 inches less than the normal. The precipitation occurred mostly in the form of thundershowers and was somewhat general on the 10-11th, 15-16th, 22-23d, and 25th, the greatest amounts being noted on the 10th and 15th. The rainfall was the greatest over the mountain districts, and least in the central and southern Ohio River counties. The greatest monthly precipitation was 4.41 inches at Pickens, and the least, 0.92 inch at Cairo. The greatest amount in any 24 consecutive hours was 1.87 inches at Pickens on the 10th. The average number of days with .01 inch or more of precipitation was 6.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Monongalia, Pleasants, Randolph, Taylor, and Wood, 10th; Raleigh, 20th; Hampshire, 21st; Hancock, 22d.

HEAVY HAIL

Moderate to heavy hail fell in and near Wheeling, Ohio County, on the 22d, with little damage. Heavy hail fell at Union, Union County, on the 20th; the stones were about the size of small marbles and caused practically no damage.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 21st; Dam 13, O. R., 1st, 14th, 17th, 19th, 23d, 26th, 27th, and 29th; Grafton, 16th; Hinton, 15th and 18th; Pickens, 15th.

Thunderstorms (dates and number of stations reporting): 10th, 15; 11th, 2; 14th, 5; 15th, 5; 21st, 4; 22d, 14; 23d, 2; 24th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

VOL. XLII PARKERSBURG, W. VA., JUNE, 1934 No. 6

GENERAL SUMMARY

The past month, with an average temperature of 74.3°, was the warmest June of State record. The month was characterized by continued warm weather, the temperature being below the normal for only two or three days. The highest temperature occurred at most stations on the 29th, the readings were near or slightly above the June record. The rainfall was considerably below the normal, and was unevenly distributed, ranging in monthly amounts from 6.78 inches at Pickens to 1.36 inches at Martinsburg. The precipitation has been below the normal during five of the past six months, and the accumulated deficiency since January 1st was 5.49 inches. Severe local thunderstorms occurred in scattered districts on the 22d, accompanied by high winds and excessive rainfall, which did some damage to growing crops, shrubs and trees. The weather conditions were generally favorable for crop growth, although the drought was somewhat severe in scattered localities of the eastern counties. At the close of the month, wheat was ripening rapidly and harvest was in progress with fair to poor yield, while corn, truck crops, pastures and meadows were in fair to good condition, but were needing rain in some sections. Practically no damage from hail was reported.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 74.3° or 4.7° above the normal. The temperature was above the normal practically the entire month, with the warmest weather occurring generally on the 28th and 29th. A cool period prevailed from the 13th to the 15th, with near frost temperatures in some scattered districts. The highest monthly mean was 78.6° at Huntington, and the lowest, 66.2° at Alpena. The highest temperature was 106° at Martinsburg on the 29th, and the lowest, 41° at Bayard on the 13th, and Alpena and Richwood on the 15th, making the monthly range for the State 65°. The greatest daily range was 49° at Brownsville on the 1st.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 3.45 inches, which was 0.90 inches less than the normal. The precipitation was the heaviest over the mountain districts, and least in the eastern counties and extreme southern section. The greatest portion of the rainfall was received on the 6-7th, 10-13th, 18-19th, 23d, and 27-28th, the greatest amounts being measured on the 12th, 19th, and 23d. The greatest monthly precipitation was 6.78 at Pickens, and the least, 1.36 inches at Martinsburg. The greatest amount in any 24 consecutive hours was 2.50 inches at Benson on the 23d. The average number of days with .01 inch or more of precipitation was 9.

LIGHT HAIL

Light hail fell in sections of the following counties on dates given: Cabell, 27th; Taylor, 12th; and Wood, 22d.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 1st, 2d, 7th, and 24th; Elkins, 23d and 24th; Hinton, 1st and 7th; New Cumberland, 28th; Stony River Dam, 18th and 19th.

Halo, lunar: Crawford, 21st.

Thunderstorms (dates and number of stations reporting): 1st, 1; 3d, 6; 4th, 4; 5th, 3; 6th, 5; 7th, 2; 8th, 2; 9th, 5; 10th, 1; 11th, 1; 12th, 10; 13th, 1; 17th, 1; 18th, 2; 21st, 2; 22d, 5; 23d, 8; 25th, 1; 26th, 1; 27th, 5; 29th, 4; 30th, 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

R. P. POWELL

VOL. XLII PARKERSBURG, W. VA., JULY, 1934 NO. 7

GENERAL SUMMARY

July was abnormally warm, being the warmest July of State record. With the exception of three or four days, the temperatures were continuously above the normal, and the highest readings were generally above previous July records. Maximum temperatures of 100° or above were recorded at practically all stations on from three to five days. This is the third consecutive month with abnormally high temperatures. The rainfall averaged practically normal and was unevenly distributed, there were a few areas having more than twice the July average, while others had less than one-half of the normal. On July 26th, high winds attending a thunderstorm, caused some damage to buildings and trees in the vicinity of Vienna, a small village about six miles north of Parkersburg. At the close of the month, wheat and oats were harvested, many fields of early potatoes marketed, and haying completed. Corn was in fair to good condition and mostly laid by; early planted was generally in roasting ear stage, but was injured somewhat by heat and drought.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 77.5° or 4.4° above the normal. The temperatures were nearly continuously above the normal, with the highest readings occurring generally on the 21st and 25th. Moderately cool weather prevailed on the 8th, 18th, and 31st, the lowest temperatures being noted on the 18th. The highest monthly mean was 82.0° at Huntington, and the lowest, 70.1° at Alpena. The highest temperature was 107° at Martinsburg on the 25th, and the lowest was 40° at Bayard on the 18th, making the monthly range for the State 67°. The greatest daily range was 52° at Wheeling.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 4.56 inches, which was 0.01 inch less than the normal. Most of the precipitation was recorded on the 7-8th, 11-14th, 22-23d, and 28-30th, the greatest amounts occurring generally on the 11th and 28th. The precipitation was the greatest in the central and extreme southern counties, and the least in scattered localities of the northeastern districts. The greatest monthly precipitation was 12.96 inches at Kayford, and the least, 1.96 inches at Upper Tract. The greatest amount in any 24 consecutive hours was 4.08 inches at Mannington on the 11-12th. The average number of days with .01 inch or more of precipitation was 10.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Hardy, 22d; Monongalia, 23d; Raleigh, 11th; Randolph, 21st; and Wood, 22d.

MODERATE HAIL

Moderately heavy hail fell in and near Williamson, Mingo County, on the 26th. Practically no damage resulted.

HEAVY HAIL

Heavy hail fell at White Sulphur Springs, Greenbrier County, on the 21st and 27th. No estimate of damage could be obtained, but was confined mostly to crops. Heavy hail fell at Martinsburg, Berkeley County, on the 28th. Size of hailstones varied, a few being as large as a small marble. Damage was confined mostly to crops.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d, 3d, 6th, and 25th; Hinton, 3d, 14th, 21st, and 25th; New Cumberland, 30th; Williamson, 3d.

Halo, lunar: Elkins, 24th.

Thunderstorms (dates and number of stations reporting): 1st, 5; 3d, 1; 4th, 2; 5th, 1; 10th, 10; 11th, 13; 12th, 7; 13th, 4; 14th, 3; 15th, 1; 16th, 4; 19th, 1; 20th, 3; 21st, 7; 22d, 10; 23d, 1; 24th, 1; 25th, 9; 26th, 8; 27th, 9; 28th, 12; 30th, 1; 31st, 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for July, 1934

VOL. XLII PARKERSBURG, W. VA., AUGUST, 1934 No. 8

GENERAL SUMMARY

August was normal in temperature and unusually wet, being the seventh wettest August of State record. The precipitation occurred mostly in the form of thundershowers and was unevenly distributed, the greatest amounts being reported from scattered localities of the southern and central counties, and the least in the northeastern and eastern sections. Maximum temperatures were quite high during the first decade, and the highest readings were noted at practically all stations from the 8th to the 10th. Temperatures were low for the season during the last three days of the month, and light frosts were reported from a few mountain stations. Unusually heavy showers in scattered sections of Putnam County on the 10th, caused considerable damage on the left bank of Poca River where three dwellings and one school house were washed away. On the 15-16th, heavy rains in sections of the northeastern counties, caused much damage to highways, bridges, and crops. More than the usual amount of sunshine was recorded, and the month was generally favorable for farm work and crop growth. Early planted corn matured rapidly and at the end of the month cutting was in progress, with some in shock. Pastures and meadows were considerably improved and were in good condition.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 71.6° or normal. Warm weather prevailed on the 2d, and from the 7th to the 18th, the highest temperatures occurring generally on the 8th and 10th. The weather was somewhat cool on the 1st, 4th, 5th, and from the 20th to the 31st, the lowest readings being noted on the 29th and 30th. The highest monthly mean was 76.5° at Huntington, and the lowest, 64.8° at Terra Alta. The highest temperature was 99° at Charleston on the 9th, and the lowest was 35° at Bayard on the 29th, making the monthly range for the State 64°. The greatest daily range was 44° at Brandywine on the 15th and Morgantown on the 31st.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 5.37 inches, which was 1.35 inches more than the normal. The greatest monthly precipitation was 9.28 inches at Williamson, and the least was 1.56 inches at Marlinton. The greatest amount in any 24 consecutive hours was 3.90 inches at Terra Alta on the 16th. The average number of days with .01 inch or more of precipitation was 11.

LIGHT HAIL

Light hail fell at Horton and Pickens, Randolph County, on the 28th, with practically no damage.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 5th, 6th, 12th, 13th, 15th, 17th, 22d, and 27th; Bens Run, 5th, 12th, 18th, and 19th; Buckhannon, 29th, 30th, and 31st; Clay, 13th, 14th, 18th, 22d, 23d, and 25th; Elkins, 7th, 12th, 13th, 18th, 19th, 22d, 27th, 29th, and 31st; Fairmont, 24th, 26th, and 28th; Hinton, 4th, 6th, 13th, 14th, 15th, 22d, 23d, 25th, 27th, and 29th; Huntington, 6th and 18th; Lewisburg, 5th, 6th, 12th, and 13th; New Cumberland, 26th, 27th, and 30th; Parkersburg, 17th and 18th; Wellsburg, 4th, 6th, 14th, 18th, 19th, 21st, 26th, and 29th; Wheeling, 1st, 4th, 7th, 8th, 17th, 18th, 19th, 23d, 26th, 27th, 29th, and 30th; Williamson, 13th and 23d.

Thunderstorms (dates and number of stations reporting): 2d, 7; 3d, 10; 4th, 1; 9th, 3; 10th, 8; 13th, 2; 15th, 8; 16th, 12; 17th, 2; 20th, 1; 22d, 2; 23d, 3; 24th, 7; 25th, 1; 27th, 1; 28th, 2; 29th, 2.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for August, 1934

VOL. XLII PARKERSBURG, W. VA., SEPTEMBER, 1934 No. 9

GENERAL SUMMARY

The month was warm and unusually wet, with the temperature extremes well within previous September records. Precipitation occurred frequently and was well distributed throughout the month, the greatest amounts being received in sections of the mountain and extreme northeastern counties, and the least in the western and central districts. The rainfall on the 29-30th, was somewhat heavy in all sections of the State. With the exception of two or three short periods, the temperatures were continuously above the normal, the highest readings occurred generally on the 25th. There were scattered light frosts in the mountain districts, but practically no damage resulted and growth continued until the close of the month, when the corn crop was safe. The weather was mostly favorable for harvesting and farm work. At the close of the month, corn cutting was about completed and many fields were in shock; late potatoes were being dug with fair yields; buckwheat harvest was in progress; apple-picking was general and in many sections completed, and seeding of winter wheat and rye was somewhat general.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 69.0°, or 2.5° above the normal. Moderately high temperatures prevailed on the 1st and 2d, 7th to the 15th, and from the 20th to the 26th, with the highest readings generally on the 24th or 25th. The temperature was below the normal from the 3d to the 6th, 16th to the 19th, and on the 27th and 28th, and light frosts occurred in a few of the mountain districts on the 3d. The highest monthly mean was 72.4° at Huntington, and the lowest, 60.7° at Alpena. The highest temperature was 94° at Creston, Glenville, Valley Chapel, and Weston, on the 25th, and the lowest was 33° at Bayard and Alpena on the 3d. The greatest daily range was 49° at Ryan on the 28th.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 4.19 inches, which was 1.26 inches more than the normal. There were three well-marked periods of precipitation, from the 4th to the 8th, 12th to the 16th, and from the 27th to the 30th, the greatest amounts being recorded on the 16th and 29th. The greatest monthly precipitation was 7.19 inches at Martinsburg, and the least, 1.86 inches at Bens Run. The greatest amount in any 24 consecutive hours was 2.85 inches at Grafton on the 29th. The average number of days with .01 inch or more of precipitation was 9.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 19th, 24th, and 26th; Arbovale, 1st, 2d, 5th, 6th, 10th, 15th, 18th, 19th, 23d, 24th, 26th, and 28th; Bancroft, 6th, 8th, 10th, 14th, 16th to the 24th, and 28th and 30th; Beckley, 19th; Bens Run, 6th, 8th, 9th, 10th, 17th, 18th, 20th, 23d, 25th, and 26th; Buckhannon, 19th and 28th; Elkins, 3d, 6th, 7th, 10th, 11th, 18th, 20th, and from the 23d to the 27th; Fairmont, 18th and 19th; Glenville, 4th to the 10th, and from the 24th to the 26th; Grafton, 19th and 28th; Hinton, 3d, 4th, 6th, 10th, 18th, 19th, 24th, 25th, and 26th; Huntington, 6th, 9th, 10th, and 19th; Marlinton, 9th to the 19th, and from the 23d to the 31st; McNeill, 2d, 6th, 18th, 19th, 23d, and 24th; New Cumberland, 9th, 10th, 11th, and from the 17th to the 21st; Parkersburg, 6th, 9th, 10th, 18th, 19th, and 23d; Rainelle, 17th, 18th, and 22d; Romney, 11th and 19th; Wellsburg, 18th, 19th, 24th, and 28th; Williamson, 5th, 8th, 10th, and 19th.

Hail, light: Huntington, 25th; Romney, 26th.

Thunderstorms (dates and number of stations reporting): 7th, 3; 8th, 1; 11th, 1; 12th, 3; 13th, 4; 14th, 3; 15th, 1; 16th, 1; 17th, 1; 19th, 1; 21st, 1; 22d, 1; 23d, 1; 24th, 2; 25th, 6; 26th, 5; 27th, 4; 29th, 8; 30th, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for September, 1934

1934
UNIVERSITY OF ILLINOIS

VOL. XLII PARKERSBURG, W. VA., OCTOBER, 1934 No. 10

GENERAL SUMMARY

October was somewhat cold and pleasant with a large percentage of sunshine. The rainfall was unusually light, and, with five exceptions, the least of October State record. There was very little rain in any section of the State from the 6th to the 25th, and there were a number of stations having from 18 to 20 consecutive days without measurable amounts. Warmer weather than usual for October prevailed during the first decade, the highest temperatures for the month occurred generally on the 9th. Temperatures were unusually low during the middle of the second decade and near the close of the month, with the first general frost of the season on the morning of the 14th, but the frost damage was small, as all crops were matured. Snow or snow flurries occurred throughout the State on the 27th and 28th, the amounts were mostly light and unimportant. Owing to heavy rains at the close of September, the drought caused little damage, except in some scattered localities where stock water was getting low, and some wells had begun to fail. High winds prevailed throughout the State on the 27th, but there was no damage reported. The month was mostly favorable for harvesting operations, and at the close of the month, corn was mostly in shock and husking was general; winter wheat, pastures, and meadows, were in fair to good condition and making fair growth, but more rainfall would have been beneficial. The apple crop was secured under favorable weather conditions.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 54.4°, which was 0.2° below the normal. The month opened cold, and the temperature was also below the normal from the 12th to the 15th, 19th and 20th, and from the 27th to the 31st, the coldest weather occurring on the morning of the 14th. The temperature was above the average from the 4th to the 6th, 8th to the 11th, 16th to the 18th, 21st and 22d, and from the 24th to the 27th, the highest readings being noted on the 9th and 21st. The highest monthly mean was 58.8° at Bancroft, and the lowest, 48.6° at Alpena. The highest temperature was 86° at Lost Creek on the 9th, and the lowest, 14° at Bayard on the 14th and Pickens on the 29th, making the monthly range for the State 72°. The greatest daily range was 58° at Pickens on the 16th.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 1.01 inches, or 1.77 inches less than the normal. The greatest monthly amounts were received in the extreme southern counties and mountain districts, and the least over the Ohio River counties. The greater portion of the precipitation was noted on the 5-6th, 18th, and 26th to the 28th, the greatest amounts being measured on the 6th and 26th. The monthly average snowfall, 0.1 inch, was slightly less than the normal. The greatest monthly precipitation was 3.34 inches at Union, and the least was 0.10 inch at Dam No. 19, Ohio River. The greatest amount in any 24 consecutive hours was 1.95 inches at White Sulpher Springs on the 5th. The average number of days with .01 inch or more of precipitation was 4.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 2d, 3d, 11th, 24th, and 25th; Bancroft, 16th, 17th, 19th, 20th, 22d, 23d, 24th, and 27th; Bens Run, 2d, 4th, 9th, 10th, 15th, 16th, 20th, and 24th; Buckhannon, 2d; Elkins, 2d, 3d, 4th, 9th, 14th, 20th, and 24th; Glenville, 2d, 3d, and 4th; Grafton, 11th and 12th; Hinton, 2d, 4th, 5th, 8th, 9th, 11th, 15th, 16th, 17th, 20th, 24th, and 25th; Huntington, 2d, 3d, 4th, 8th, 11th, 15th, 20th, 23d, and 24th; Marlinton, 4th, 5th, 11th, 12th, 13th, 20th, and 24th; Parkersburg, 24th; Pickens, 18th; Romney, 3d and 25th; Wellsburg, 1st, 3d, 4th, 11th, and 25th; Williamson, 3d, 8th, 11th, 12th, 14th, 20th, 22d, and 23d.

Hail, light: Grafton, Mannington, Wellsburg, and Wheeling, 27th; Martinsburg, 28th, and New Cumberland, 29th.

Thunderstorms (dates and number of stations reporting): 17th, 1; 20th, 1; 21st, 1; 25th, 1; 26th, 4; 31st, 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days: for example, ^{b} represents two days, etc.

VOL. XLII PARKERSBURG, W. VA., NOVEMBER, 1934 No. 11

GENERAL SUMMARY

The month was decidedly warm and somewhat wet, the average temperature, 46.6°, was the sixth highest of November State record. There were two well-marked periods of warm weather, 3d to the 8th, and from the 17th to the 30th, the maximum temperatures on the 30th, were the highest of record for so late in the season at a number of stations. The coldest weather prevailed during the second decade, with the lowest readings on the morning of the 15th. The precipitation was unfavorably distributed, the amounts were unusually heavy over the northeastern districts near the close of the third decade. The snowfall was light to moderate, and averaged considerably below the normal This was the seventh month of the year with an excess in temperature and a deficiency in precipitation. The weather was generally favorable for outdoor work, and at the close of the month, winter grains were in fair to poor condition, corn was mostly cribbed, and pastures and meadows were green in scattered localities.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 46.6°, or 3.4° above the normal. Temperatures were above the normal from the 3d to the 8th, and from the 17th to the 30th, the highest readings being noted on the 19th and 30th. Moderately cold weather prevailed on the 1st and 2d, 6th, and from the 9th to the 16th, with the lowest temperatures on the 15th. The highest monthly mean temperature was 50.8° at Huntington, and the lowest, 41.8° at Alpena and Rainelle. The highest temperature was 80° at Ryan on the 21st and 30th, and Huntington and Weston on the 30th, and the lowest, 8° at Pickens on the 15th, making the monthly range for the State 72°. The greatest daily range was 60° at McNeill on the 17th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 3.30 inches, which was 0.53 inch more than the normal. The precipitation was the heaviest over the mountain and central districts, and lightest in the Ohio River counties. The greater portion of the precipitation was received on the 1st, 4-6th, 10-13th, 23d, and from the 28th to the 30th, the greatest amounts being measured on the 23d and 29th. The average snowfall for the State, 1.0 inch, was 1.2 inches less than the normal. The greatest monthly precipitation was 5.45 inches at Charleston, and the least, 1.79 inches at Dam No. 26, Ohio River. The greatest amount in any 24 consecutive hours was 1.95 inches at White Sulpher Springs on the 28th. The average number of days with .01 inch or more of precipitation was 9.

MISCELLANEOUS PHENOMENA

Fogs, dense: Huntington and Pt. Pleasant, 2d; Huntington and Romney, 3d; Arbovale, Elkins, Huntington, Mannington, Marlinton, New Cumberland, and Valley Chapel, 5th; Huntington, 9th and 15th; Bancroft, Elkins, Grafton, Mannington, Valley Chapel, and Parsons, 20th; Kearneysville, 25th and 30th; Piedmont and Stony River Dam, 27th, 28th, and 30th; New Cumberland, 29th.

MISCELLANEOUS PHENOMENA (Continued)

Hail, light: Hinton, 30th; Pt. Pleasant, 6th; Roanoke, 5th.

Halo, lunar: Huntington and Parkersburg, 20th.

Sleet: New Cumberland and Valley Chapel, 2d.

Thunderstorms (dates and number of stations reporting): 1st, 9; 5th, 8; 6th, 8; 19th, 2; 30th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Vol. XLII Parkersburg, W. Va., December, 1934 No. 12

GENERAL SUMMARY

The month was colder and drier than usual, with about the normal amount of sunshine. This was the driest December since 1927, and the seventh driest of State record. Although the precipitation averaged considerably below the normal, there were a few small areas in the extreme eastern division with plus departures. Comparatively cold weather for the season prevailed almost continuously during the first half of the month, the temperature readings on the morning of the 11th, were near or somewhat below zero. The highest temperatures occurred generally on the 1st, 25th, and 28th. The snowfall was much lighter than normal, and fell mostly during the second decade, the amounts were heavy in scattered localities of the mountain districts. Moderately high winds prevailed in sections of the State on the 26th, with practically no damage. Owing to freezing and thawing, without much snow-cover, the conditions were unfavorable for winter grains. The weather was mostly favorable for out-door work.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 33.5°, or 1.2° below the normal. The temperatures were above the normal from the 1st to the 4th, 16th, 19th, 20th to the 25th, and 28th and 29th, with the highest temperatures on the 1st and 28th. Moderately cold weather prevailed on the 5th to the 15th, 26th, 27th, 30th, and 31st, the lowest temperatures being noted on the 11th and 12th. The highest monthly mean was 37.8° at Williamson, and the lowest, 28.6° at Bayard and Pickens. The highest temperature was 78° at Sutton on the 1st, and the lowest, 8° below zero at Bayard and Parsons on the 11th, making the monthly range for the State 86°. The greatest daily range was 45° at Fairmont on the 28th.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 2.20 inches, which was 1.14 inches less than the normal. The precipitation was greatest over the eastern and mountain districts, and least over the Ohio River counties. Most of the precipitation was received on the 1st, 4th, 10th, 11th, 16th, 19th, 20th, 22d, 26th, and 29th, the greatest amounts being measured on the 1st and 26th. Most of the snow fell on the 10th, 11th, and 20th. The greatest monthly precipitation was 5.06 inches at Pickens, and the least, 0.82 inch at Dam 26, Ohio River. The greatest amount in any 24 consecutive hours was 3.10 inches at Martinsburg on the 1st. The greatest monthly snowfall was 24.0 inches at Pickens. The average number of days with .01 inch or more of precipitation was 10.

MISCELLANEOUS PHENOMENA

Fogs, dense: Creston, 22d; Hinton, 15th, 22d, and 24th; Huntington, 3d and 27th; Martinsburg, 5th; New Cumberland, 18th.

Halos, lunar: Huntington, 18th; Parkersburg, 20th, 21st, and 24th.

MISCELLANEOUS PHENOMENA (Continued)

Sleet: Cairo and Parkersburg, 3d; Alpena and Stony River Dam, 17th; Stony River Dam, 18th; Bayard, Brandywine, Richwood, Romney, and Upper Tract, 19th; Martinsburg, 22d; Alpena, Beckley, Marlinton, and Richwood, 31st.

Thunderstorms: Bens Run and Martinsburg, 1st; Buckhannon, Crawford, Fairmont, and Mannington, 19th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for December, 1934

Vol. XLII   Parkersburg, W. Va., Year, 1934   No. 13

GENERAL SUMMARY

The year, 1934, averaged somewhat warmer and much drier than usual. This was the fifth driest year of State record. The snowfall was considerably above the normal, and fell mostly during February and March.

February was unusually cold, being the second coldest of State record. March, October, and December averaged slightly below the normal. January and the late spring months were warm, June and July were unusually warm, while September and November were slightly above the average.

The precipitation was unfavorably distributed for good growth. March, August, September, and November were wet, but the other months were dry. The precipitation was deficient from March to July, inclusive, and the conditions were generally droughty, causing much damage to crops.

The season of growth for ripening of all crops extended from the latter part of April to the middle of October, being somewhat longer than usual.

Cloudiness was slightly below normal. The sunshine at Parkersburg averaged 55 per cent. of the possible amount, or 9 per cent. above the normal. The average at Elkins was 50 per cent., or 5 per cent. above the normal.

The wind movement at Parkersburg was 54,974 miles, and at Elkins 53,654 miles.

THE WEATHER BY MONTHS

JANUARY.—January was warm with only a few short cold periods and the precipitation averaged considerably below the normal. A severe cold wave covered the State on the evening of the 28th, and on the morning of the 29th temperature readings ranged from zero to 15° below in practically all sections. The snowfall was unusually light. Stock remained in the open during the greater part of the month.

FEBRUARY.—This was the coldest February since 1895, and the second coldest February of State record. Unusually low temperatures were noted on the mornings of the 9th and 28th. The precipitation was unusually light and fell mostly in the form of snow. Winter grains were well protected by a good snow-cover, and little damage resulted from the cold weather.

MARCH.—Much cloudiness prevailed during the month with frequent rains, which averaged somewhat above the normal. The month was considerably colder than usual, with zero readings on the mornings of the 1st and 12th. The snowfall averaged much above the normal, and was heavy in scattered localities of the mountain districts. Winter grains were in fair to good condition.

APRIL.—The month was warm and somewhat drier than normal. Freezing temperatures and killing frosts occurred frequently during the last decade, causing great damage to fruit bloom and truck. Farm work was about two weeks late. The greater part of the spring plowing was completed and some oats were sown and potatoes and corn planted.

MAY.—The month was unusually dry, being the driest May since 1914, and the third driest of May State record. Freezing temperatures and killing frosts were reported from many districts on four or five days. The temperature averaged considerably above the normal. The soil was too dry for the proper germination of oats and corn. Frosts caused considerable damage to fruit, gardens, and other vegetation.

JUNE.—June was exceptionally warm, being the warmest June of State record. The rainfall averaged considerably below the normal. Weather conditions were generally favorable for crop growth, although the drought was somewhat severe in scattered localities of the eastern counties. At the close of the month, wheat was ripening rapidly and harvest was in progress with fair to poor yield, while corn, pastures, and meadows were in fair to good condition, but rain was needed in many sections.

JULY.—The month was the warmest July of State record. Maximum temperatures of 100° or above were recorded at practically all stations on from three to five days. Rainfall averaged practically normal. At the close of the month, wheat and oats were harvested, many fields of early potatoes marketed, and haying completed. Corn was in fair to good condition and mostly laid by; early planting was generally in roasting ear stage, but was injured somewhat by heat and drought.

AUGUST.—Temperatures were about normal, while the rainfall averaged considerably above normal. Unusually low temperatures prevailed during the last few days of the month, with light frosts in the mountain districts. The month was generally favorable for farm work and crop growth.

SEPTEMBER.—A warm, wet month. Precipitation occurred frequently and was well distributed throughout the month. With the exception of two or three short periods, the temperatures were continuously above the normal. The weather was mostly favorable for crop growth.

OCTOBER.—The month was somewhat cold and pleasant with a large percentage of sunshine. The precipitation was unusually light. The first general killing frost of the season occurred on the 14th, but the damage was small, as all crops were matured. Snow or snow flurries occurred generally on the 27th and 28th, the amounts were mostly light and unimportant.

NOVEMBER.—The month was decidedly warm and somewhat wet, the average temperature, 46.6°, was the sixth highest of November State record. The snowfall was light to moderate, and averaged much below the normal. This was the seventh month of the year with an excess in temperature and a deficiency in precipitation. Weather generally favorable for outlook work.

DECEMBER.—A cold, dry month, with about the normal amount of sunshine. Unusually cold weather prevailed generally on the 11th, temperature readings were near or slightly below zero. The snowfall was much lighter than normal, and fell mostly during the second decade. Owing to freezing and thawing, without much snow-cover, the conditions were unfavorable for winter grains.

VOL. XLIII PARKERSBURG, W. VA., JANUARY, 1935 No. 1

GENERAL SUMMARY

The month averaged somewhat warmer and much wetter than normal. During the first two decades, unusually warm weather for the season prevailed, with maximum temperatures near the January record at a number of stations on several days. The last decade was cold, temperature readings were generally below zero during the last week of the month, and ranged from near or slightly below zero in the extreme southern counties, to 23 degrees below zero in the northeastern districts. This was the sixth consecutive warm January. Precipitation occurred almost daily from the 12th to the 23d, the amounts were unusually heavy over the central valleys and extreme southern districts, causing many small streams to overflow and highways to be flooded. The snowfall averaged considerably above the normal, and was heavy in scattered districts of the mountain sections. Navigation was interrupted or suspended on navigable streams during the last few days of the month by moderately heavy ice. Sleet was general throughout the State on the 17th, 19th, 20th, and 22d, the fall was heavy at Arbovale on the 17th. On account of the wet condition of the soil and the large number of days with precipitation, the month was generally unfavorable for outdoor work. During the cold weather winter grains were protected by snow cover, and at the close of the month were mostly in fair condition.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 33.3°, or 0.6° above the normal. Temperatures were much above the normal during the first two decades, with the highest readings occurring generally on the 9th and 21st. Temperatures were continuously low from the 22d to the end of the month, the lowest temperatures were noted on the mornings of the 24th, 25th, and 28th. The highest monthly mean was 38.8° at Williamson, and the lowest, 29.0° at Bayard. The highest temperature was 74° at Ravenswood on the 9th, and the lowest was 23° below zero at McNeill on the 25th, making the monthly range for the State 97°. The greatest daily range was 58° at Reedsville on the 24th.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 4.48 inches, which was 0.86 inch more than the normal. The greater portion of the precipitation was received on the 1st, 7-9th, 17th, and from the 19th to the 23d, the greatest amounts being measured on the 17th and 20th. The average snowfall for the State, 9.7 inches, was 1.8 inches more than the normal. The greatest monthly precipitation was 7.68 inches at Alpena, and the least, 1.82 inches at Marlinton. The greatest amount in any 24 consecutive hours was 2.50 inches at Alpena on the 20th. The greatest monthly snowfall was 30.0 inches at Kearneysville, and the greatest 24 hour fall was 13.0 inches at Kearneysville and Upper Tract, on the 23d. The average number of days with .01 inch or more of precipitation was 12.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 6th, 7th, 8th, 20th, and 21st; Charleston, 20th; Creston, 9th; Grafton, 8th and 10th; Hinton, 15th, 21st, 29th, and 31st; Huntington, 12th; Marlinton, 3d, 7th, and 8th; Martinsburg, 3d, 8th, 9th, and 10th; McNeill, 6th and 7th; Piedmont, 7th, 8th, and 9th; Pt. Pleasant, 8th, 9th, and 10th; Wellsburg, 8th, 9th, and 20th; Wheeling, 5th.

Halos, lunar: Crawford, 13th; Parkersburg, 12th.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for January, 1935

U. S. DEPARTMENT OF AGRICULTURE, WEATHER BUREAU

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

R. P. POWELL

VOL. XLIII PARKERSBURG, W. VA., FEBRUARY, 1935 No. 2

GENERAL SUMMARY

Mild, dry weather prevailed during most of the month. The monthly mean temperature, 34.9°, averaged nearly 2.0° above the normal, while the precipitation was slightly less than 1.00 inch below the normal. The deficiency in precipitation was general throughout the State, as only three stations in the northern Ohio River counties received more than the average. Warm weather prevailed during the second and third decades, the highest temperatures occurred generally on the 15th, 22d, and 25th. Zero temperatures were noted in some of the northern and mountain districts on the 1st and 17th. While the snowfall was much lighter than usual, heavy amounts were reported from scattered localities. The weather was generally favorably for farming activities and considerable plowing was done. The few days of cold weather during the last week retarded the development of fruit buds. Hail was reported from scattered districts on the 14th, 15th, and 23d.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 34.9°, or 1.7° above the normal. The month opened cold, and the temperature was below the normal from the 20th to the 22d, and from the 26th to the 28th, with the lowest readings on the 1st and 26th. The temperature was nearly continuously above the normal during the second decade, and on the 24th and 25th, the highest temperature occurred generally on the 15th, 22d, and 25th. The highest monthly mean temperature was 40.3° at Charleston, and the lowest, 29.0° at Marlinton. The highest temperature was 70° at Hinton on the 22d, and the lowest, 9° below zero at Wardensville on the 1st, making the monthly range for the State 79°. The greatest daily range was 61° at Brownsville on the 25th.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 2.33 inches, which was 0.79 inch less than the normal. Most of the precipitation was received on the 9-10th, 14-17th, and 23d, the greatest amounts being measured on the 26-27th. Snow fell in many localities on the 3d-4th, 11th, 20th-22d, and 26-27th, being moderately heavy at a few stations on those dates. The greatest monthly precipitation was 4.25 inches at Pickens, and the least, 1.20 inches at Marlinton. The greatest amount in any 24 consecutive hours was 1.90 inches at Wheeling on the 22-23d. The snowfall averaged 5.3 inches, which was 3.2 inches less than the normal. The greatest monthly snowfall was 20.5 inches at Davis. The average number of days with .01 inch or more of precipitation was 10.

MISCELLANEOUS PHENOMENA

Fogs, dense: Alpena, 10th; Arbovale, 14th; Beckley, 6th and 9th; Brownsville, 9th; Charleston, 1st, 9th, and 11th; Crawford, 10th and 14th; Creston, 9th and 16th; Hinton, 9th, 12th, 13th, and 16th; Marlinton, 10th and 14th; Pickens, 3d, 4th, 6th, 9th, 10th, and 16th; Reedsville, 3d and 17th; Spencer, 10th; Stony River Dam, 3d and 17th; Wellsburg, 13th; Williamson, 12th.

Sleet: Beckley, 26th; Grafton, 3d; Horton, 26th; Reedsville, 3d and 17th; Richwood, 4th, 17th, and 23d; Williamson, 26th.

Sleet, heavy: Stony River Dam, 4th, 17th, and 23d.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for February, 1935

Vol. XLIII Parkersburg, W. Va., March, 1935 No. 3

GENERAL SUMMARY

With an average temperature of 48.7°, the past month was the warmest March since 1921, and the fifth warmest of March State record. The month was almost continuously warm, moderately cold weather prevailed on four or five days. The precipitation was unusually heavy in practically all districts, there were only a few stations that received less than the normal. Heavy rains occurred frequently during the second and third decades, especially from the 10th to the 12th, and from the 23d to the 25th, causing considerable damage by flooding highways in sections of the central and southern counties. Many small streams in the Great Kanawha Basin were at a bankful stage. The snowfall was mostly light and unimportant. Dust storms were somewhat general over the State on the 5th, 6th, 21st, 22d, 23d, 24th, 26th, 29th, and 30th. The dust was mostly light with but little deposit, although car drivers in the mountain sections reported that the dust was thick enough to require the use of headlights. The conditions were generally favorable for fruit, but farm work was much retarded by frequent rains. Winter wheat and pastures made good growth, and were in good condition at the close of the month.

TEMPERATURE

The monthly mean for the State, determined from 55 stations, was 48.7°, or 6.3° above the normal. The weather was almost continuously warm during most of the month, with the highest temperature generally on the 16th. Mild weather for the season prevailed on the 1st, 8th, 9th, 12th to the 14th, and on the 18th, the lowest readings occurring generally on the 1st and 18th. The highest monthly mean temperature was 54.2° at Charleston, and the lowest, 43.7° at Alpena. The highest temperature was 86° at Glenville and Romney on the 16th, and the lowest was 10° at Gary on the 1st, making the monthly range for the State, 76°.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 5.51 inches, which was 1.59 inches more than the normal. The precipitation was the heaviest over the southern and central sections, and lightest in the eastern counties. Precipitation was general from the 4th to the 8th, 10th to the 14th, 19th to the 26th, and on the 28th and 30th, the greatest amounts being measured on the 11-12th, and 23d-25th. The greatest monthly precipitation was 11.87 inches at Williamson, and the least, 1.65 inches at Wardensville. The greatest amount of precipitation in any 24 consecutive hours was 3.62 inches at Lewisburg on the 12th. The average number of days with .01 inch or more of precipitation was 14.

RIVERS

Heavy rains from the 10th to the 12th, caused a moderate flood in the Little Kanawha Basin and in the Ohio River at Dam 25 and Point Pleasant. The following crest stages occurred: Glenville, 25.5 feet; Creston, 23.4 feet; Dam 25, 46.8 feet, and Point Pleasant, 43.6 feet.

MISCELLANEOUS PHENOMENA

Fogs, dense: Crawford, 12th; Grafton, 30th; Hinton, 4th; New Cumberland, 22d; Parkersburg, 20th; Pickens, 3d, 21st, and 22d; Stony River Dam, 30th.

Hail: Reedsville, 28th.

Halos, lunar: Elkins, 15th and 16th; Parkersburg, 18th; Pickens, 16th.

Sleet, Horton, Martinsburg, and McNeill, 12th.

Thunderstorms (dates and number of stations reporting): 3d, 3; 12th, 1; 20th, 1; 21st, 8; 22d, 1; 23d, 22; 24th, 4; 25th, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days: for example, ^{b} represents two days, etc.

Daily Precipitation for March, 1935

WEST VIRGINIA SECTION

R. P. POWELL

VOL. XLIII PARKERSBURG, W. VA., APRIL, 1935 No. 4

GENERAL SUMMARY

The past month was unusually cold, being the coldest April since 1928, and the eighth coldest of State record. Exceptionally cold weather prevailed during the middle of the second decade, temperature readings were the lowest of record for so late in the season on the morning of the 16th, when heavy to killing frosts were general over the State, causing great damage to early fruit where more advanced. A low temperature of 13° was noted at Alpena and Pickens on the morning of the 16th. April was slightly drier than usual, most of the month. The snowfall averaged much above the normal and was heavy in the mountain regions. The falls were light to moderate over the western and central counties, where the snow melted as it fell. Dust, mostly light and unimportant, prevailed over some sections of the State on the 2d, 3d, 4th, 5th, 12th, 13th, 18th, 28th, and 29th. On account of the continued wet weather during the first half of the month, field operations were practically at a standstill; during the last half, plowing and seeding progressed rapidly, and wheat, rye, and pastures were in excellent condition and making good growth. Potatoes were planted in most sections.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 49.8°, or 2.0° below the normal. Moderately warm weather prevailed on the 1st and 2d, 4th and 5th, 19th to the 21st, and from the 24th to the 29th, with the highest readings generally on the 26th and 27th. Temperatures were nearly continuously low from the 6th to the 18th, the lowest temperature being noted generally on the 16th and 17th. The highest monthly mean temperature was 55.8° at Charleston, and the lowest, 42.9° at Alpena and Bayard. The highest temperature was 92° at Martinsburg on the 27th, and the lowest was 13° at Alpena and Pickens, on the 16th, making the monthly range for the State, 79°. The greatest daily range was 56° at McNeill of the 26th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 3.45 inches, which was 0.06 inch less than the normal. Precipitation occurred almost daily during the first half of the month, and from the 28th to the 30th, the greatest amounts being measured on the 1st, 6th, and 8th. The average snowfall for the State, 2.7 inches, was 0.8 inch more than the normal. The snowfall was unusually heavy in scattered localities of the mountain districts. The greatest monthly precipitation was 10.62 inches at Davis, and the least, 1.54 inches at New Cumberland. The greatest amount in any 24 consecutive hours was 2.58 inches at Bluefield on the 1st. The average number of days with .01 inch or more of precipitation was 13.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Hardy, 7th and 8th; Kanawha, 7th; Lewis, 5th; Preston, 15th; Randolph, 5th; Wirt, 29th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Creston and Glenville, 18th; Hinton, 6th; Huntington, 12th and 18th; Parkersburg, 18th; Pickens, 6th and 17th; Stony River Dam, 4th, 5th, and 7th.

Halo, lunar: Aberdeen, 21st.

Sleet: Alpena, 18th; Beckley, 13th; Brandywine, 7th and 9th; Elkins, 7th and 8th; Hastings, 16th; Hinton, 4th; Horton, 7th; Mannington, 8th; McNeill, 7th and 8th; Reedsville, 8th; Stony River Dam, 17th; Upper Tract, 7th and 8th.

Thunderstorms (dates and number of stations reporting): 5th, 6; 6th, 1; 27th, 1; 29th, 13; 30th, 1.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for April, 1935

VOL. XLIII PARKERSBURG, W. VA., MAY, 1935 No. 5

GENERAL SUMMARY

May was unusually cool, especially during the first and second decades, when heavy to killing frosts or freezing temperatures occurred in practically all sections. The frost damage was unimportant and was confined mostly to tender plants. A low temperature of 26° was noted at Pickens on the 1st and 2d. Warm weather for the season prevailed generally during the last few days of the month, with maximum temperatures near or slightly above 90°. The rainfall was generally near or considerably above the normal and quite favorably distributed, as there were only four stations reporting monthly amounts less than the average. This was the fifth wettest May of State record. The greatest monthly amounts were received in sections of the central and southern counties, and the least in the extreme eastern districts. Heavy local showers on the 14th, caused considerable damage to crops in sections of Gilmer County. Continued rains and cool weather greatly retarded growth and farm work, wheat however was in good to excellent condition, and at the close of the month was making good growth, and heading in many districts; corn planting was considerably delayed and was about two weeks late; potatoes, pastures, and meadows were in fair to good condition.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 59.2°, or 2.4° below the normal. The temperature was below the normal for the entire month, with the exception of of seven days, or the 3d, 6th, 9th, 10th, 13th, 28th, and 29th. On the 4th, 16th, and 24th, the temperature averaged 14° below the normal. The highest monthly mean temperature was 64.1° at Charleston, and the lowest, 53.3° at Alpena. The highest temperature was 92° at Martinsburg on the 28th, and the lowest was 26° at Pickens on the 1st and 2d, making the monthly range for the State 66°. The greatest daily range was 50° at Cairo on the 27th.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 6.07 inches, which was 2.05 inches more than the normal. The greater portion of the precipitation was received on the 2d-7th, 10th, 13-14th, 21st, and 30th, the greatest amounts being measured on the 2-3d, 6-7th, and 21st. The greatest monthly precipitation was 8.31 inches at Spencer, and the least, 2.14 inches at Harpers Ferry. The greatest amount in any 24 consecutive hours was 3.11 inches at Dam 26, Ohio River on the 3d. The average number of days with .01 inch or more of precipitation was 13.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Lewis, 2d; Roane, 3d; McDowell, 4th; Raleigh, 5th; Randolph, 6th; Mingo, 13th.

MISCELLANEOUS PHENOMENA

Fogs, dense: Beckley, 15th; Charleston, 11th; Elkins, 25th; Glenville and Grafton, 11th; Hinton, 3d, 13th, 25th, and 31st; Mannington, 26th; New Cumberland, 8th; Pickens, 14th and 23d; Wellsburg, 11th.

Halo, solar: Aberdeen, 19th.

Thunderstorms (dates and number of stations reporting): 2d, 14; 3d, 13; 4th, 1; 5th, 1; 6th, 12; 7th, 3; 9th, 3; 10th, 10; 12th, 5; 13th, 4; 14th, 5; 21st, 1; 22d, 7; 23d, 3.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates †† Received too late to be included in means and summaries

Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for May, 1935

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

R. P. POWELL

Vol. XLIII   Parkersburg, W. Va., June, 1935   No. 6

GENERAL SUMMARY

June was much cooler and considerably wetter than usual, with the percentage of sunshine much below the normal. This was the coolest June since 1929, and the wettest since 1928. The rainfall occurred during thundershowers and was unfavorably distributed, the greatest amounts were received over the middle Ohio River counties and mountain districts, and the least in scattered localities of the northeastern panhandle section. There were a number of stations recorded from 10 to 12 consecutive days with measurable precipitation. Temperatures were unusually low for the season during the first decade, readings were near freezing at several mountain stations. The maximum temperatures were well within previous records. Heavy to excessive rains caused much local damage in scattered sections. On account of the continued cool, wet weather during the first half of the month, planting of corn and cultivation was much retarded. Early planted corn was backward early in the month, but made excellent growth during the last two decades, although many fields were weedy. At the close of the month, haying was general and wheat was being cut in most districts, with fair to good yields, and pastures and meadows were generally in good to excellent condition.

TEMPERATURE

The monthly mean for the State, determined from 52 stations, was 68.4°, or 1.2° below the normal. The temperature was nearly continuously below the normal, with the lowest readings on the 1st, 6th, and 10th. Moderately warm weather prevailed on the 2d and 3d, 13th to the 18th, and from the 27th to the 30th, with the highest temperatures occurring generally on the 18th and 29th. The highest monthly mean temperature was 72.8° at Bancroft, and the lowest was 61.1° at Alpena. The highest temperature was 98° at Hinton on the 18th, and the lowest, 32° at Bayard on the 1st, making the monthly range for the State 66°. The greatest daily range was 51° at Wellsburg.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 5.20 inches, which was 0.83 inch more than the normal. The greater portion of the precipitation was received on the 3d-4th, 8-9th, 15th-22d, and 29th, the greatest amounts being recorded on the 8th, 16th, and 29th. The greatest monthly precipitation was 9.27 inches at Alpena, and the least, 2.29 inches at Upper Tract. The greatest amount in any 24 consecutive hours was 1.85 inches at Parsons on the 8th. The average number of days with .01 inch or more of precipitation was 14.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Berkeley, 22d; Cabell, 30th; Monongalia, 29th; Upshur, 22d.

MISCELLANEOUS PHENOMENA

Fogs, dense: Creston, 6th, 12th, 13th, and 14th; Elkins, 1st, 6th, 10th, 19th, 25th, 26th, 28th, 29th, and 30th; Hinton, 25th and 29th; Huntington, 25th; New Cumberland, 1st, 12th, and 13th; Pt. Pleasant, 6th, 13th, and 25th; Reedsville, 13th, 25th, and 29th; Romney, 17th and 30th.

Thunderstorms (dates and number of stations reporting): 2d, 2; 3d, 4; 5th, 2; 6th, 2; 7th, 1; 12th, 2; 13th, 2; 14th, 6; 15th, 3; 16th, 2; 17th, 2; 18th, 5; 19th, 2; 20th, 1; 21st, 3; 22d, 3; 23d, 1; 25th, 2; 26th, 1; 27th, 2; 28th, 2; 29th, 11; 30th, 6.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for June, 1935

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

R. P. POWELL

VOL. XLIII PARKERSBURG, W. VA., JULY, 1935 No. 7

GENERAL SUMMARY

July was considerably warmer and slightly wetter than usual. The month was characterized by nearly continuously warm weather, unfavorably distributed rainfall, excessive rainfall with floods in some of the smaller streams, and high stages in the rivers for the season. Although the month was warm, the average temperature was nearly 2° lower than July, 1934. The precipitation averaged much above the normal over the southern and western districts, and below the normal in the northern and in some scattered sections of the eastern counties, where the amounts were insufficient. Unusually heavy rains occurred during the first and last decades, the 24-hour amounts were the greatest of record for Elkins and Parkersburg. Elkins received 5.45 inches on the 7-8th; Parkersburg, 4.61 inches on July 31st and August 1st. Owing to continued wet weather in the western and southern districts, much grain was damaged in shock. Many fields of corn were considerably damaged and many stacks of hay washed away by marked rises in in the smaller streams. At the close of the month, wheat, oats, and hay were generally harvested with yields averaging fair to good, and many fields of early potatoes marketed. Corn was in fair condition and mostly laid by. There was practically no damage from hail.

TEMPERATURE

The monthly mean for the State, determined from 51 stations, was 75.6°, or 2.5° above the normal. Warm weather prevailed generally during most of the month, with the highest readings on the 12th and 20th. Moderately low temperatures occurred generally on the 14th and 30th, the lowest temperatures being noted on the 30th. The highest monthly mean was 80.2° at Martinsburg, and the lowest, 68.6° at Alpena. The highest temperature was 101° at Martinsburg on the 12th, and the lowest, 46° at Reedsville on the 30th, making the monthly range for the State 55°. The greatest daily range was 44° at Wellsburg on the 17th.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 4.61 inches, which was 0.04 inch more than the normal. Rains were quite general on the 4-8th, 12-13th, 21st-26th, and 31st, the greatest amounts being noted on the 4th, 7-8th, and 31st. The greatest monthly rainfall was 10.24 inches at Dam 25, Ohio River, and the least, 1.15 inches at Morgantown. The greatest amount in any 24 consecutive hours was 5.45 inches at Elkins on the 7-8th. The average number of days with .01 inch or more of precipitation was 11.

LIGHT HAIL

Light hail was noted in sections of the following counties on dates given: Preston, 20th; Randolph, 9th.

MODERATE HAIL

Moderately heavy hail fell in and near Reedsville, Preston County, on the 9th. Practically no damage resulted.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 6th to 13th, 15th, 16th, 19th, 21st, and 30th; Bens Run, 6th, 10th, 11th, 12th, 13th, and 14th; Charleston, 11th; Elkins, 1st, 2d, 8th, 10th, 11th, 12th, 14th, 16th, 27th, and 30th; Glenville, 2d, 6th, and 30th; Hinton, 5th, 6th, 7th, 9th, 12th, 15th, 20th, 25th, 26th, 30th, and 31st; New Cumberland, 31st; Rainelle, 30th; Parkersburg, 6th and 11th; Reedsville, 8th, 9th, 10th, and 16th; Romney, 27th; Wardensville, 23d; Wellsburg, 7th, 27th, and 30th.

Thunderstorms (dates and number of stations reporting): 1st, 3; 3d, 2; 4th, 6; 5th, 5; 7th, 4; 8th, 4; 9th, 4; 13th, 5; 15th, 3; 16th, 2; 18th, 2; 19th, 3; 20th, 6; 21st, 4; 22d, 3; 23d, 6; 24th, 9; 25th, 7; 26th, 6; 28th, 3; 30th, 2; 31st, 9.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for July, 1935

WEST VIRGINIA SECTION

R. P. POWELL

Vol. XLIII Parkersburg, W. Va., August, 1935 No. 8

GENERAL SUMMARY

August was exceptionally wet and somewhat warmer than usual. The average rainfall, 6.71 inches, was the third heaviest of August State record. On August 2d, 3d, and 7th, a series of heavy thundershowers occurred in most sections of the State, excessive 24-hour amounts were received at a number of stations. The greatest 24-hour amount was 4.42 inches at Clarksburg, Harrison County, on the 3d. During the 6-7th, heavy showers occurred over the Little Kanawha and Tygart Valley watersheds, causing considerable damage, many fields of corn were destroyed, and stacks of wheat and hay washed away. The heavy showers caused decided rises in the smaller rivers and moderate stages in the Ohio River. The Little Kanawha River at Glenville, W. Va , reached a flood stage of 28.2 feet on the 7th, and Creston, W. Va., 21.0 feet on the 8th. The Tygart Valley River reached a flood stage at Elkins of 14.6 feet on the 8th. The first two decades of the month were nearly continuously warm, while the last, was unusually cool, with light frosts in scattered localities of the mountain districts on the 29th and 31st. No hail storms were noted. On account of the continued wet weather during the first half of the month much grain was damaged in the shock. Some loss also occurred along the Ohio River. Corn made fair to good growth. Meadows and pastures, however, were improved by the warm, wet weather.

TEMPERATURE

The monthly mean for the State, determined from 49 stations, was 73.2°, or 1.6° above the normal. The temperature was above the normal nearly continuously during the first two decades, and below during the last 10 days of the month, with the lowest readings on the mornings of the 29th and 31st. The highest monthly mean temperature was 77.8° at Huntington, and the lowest was 65.8° at Alpena. The highest temperature was 101° at Martinsburg on the 1st, and the lowest, 33° at Bayard on the 29th, making the monthly range for the State 68°. The greatest daily range was 48° at Brownsville on the 26th.

PRECIPITATION

The average precipitation for the State, determined from 86 stations, was 6.71 inches, which was 2.63 inches more than the normal. The rainfall was heaviest in the central counties thence westward to the Ohio River, and lightest over the southern districts. Heavy to excessive showers occurred almost daily during the first week. From the 11th to the 18th, showers occurred in practically all districts. Moderate to heavy showers fell on the 27-28th. The heaviest showers were noted on the 2d, 3d, and 7th. The greatest monthly rainfall was 11.45 inches at Sutton, and the least, 1.78 inches at Bluefield. The average number of days with .01 inch or more of precipitation was 12.

MISCELLANEOUS PHENOMENA

Fogs, dense: Arbovale, 6th, 11th, 12th, 16th, 23d, and 29th; Bens Run, 5th, 6th, 9th, 10th, and 29th; Buckhannon, 31st; Charleston, 5th and 31st; Crawford, 5th and 6th; Elkins, 12th, 13th, 14th, 25th, 26th, 28th, and 29th; Glenville, 9th, 10th, 12th, 15th, 23d, and 29th; Hinton, 2d, 3d, 8th, 12th, 13th, 15th, and 23d; Huntington, 31st; Parkersburg, 11th, 29th, and 31st; Pickens, 22d; Pt. Pleasant, 29th and 30th; Wellsburg, 12th, 29th, and 31st; Williamson, 5th.

MISCELLANEOUS PHENOMENA (Continued)

Thunderstorms (dates and number of stations reporting): 1st, 14; 2d, 16; 3d, 15; 4th, 6; 6th, 5; 7th, 14; 8th, 4; 9th, 2; 10th, 10; 11th, 2; 13th, 7; 14th, 11; 15th, 7; 16th, 3; 21st, 4; 27th, 3; 28th, 3; 29th, 5.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for August, 1935

WEST VIRGINIA SECTION

R. P. POWELL

VOL. XLIII PARKERSBURG, W. VA., SEPTEMBER, 1935 NO. 9

GENERAL SUMMARY

The past month was unusually cool, being the coolest September since 1928. During the last few days of the month temperature readings were exceptionally low, and ranged from 22 to 43°, the readings on the morning of the 30th were the lowest of September record at a number of stations. Light to heavy frosts were noted in scattered localities on the 24th, and the first general heavy to killing frost on the 30th. The rainfall was somewhat heavy and unfavorably distributed throughout the month and over the State. The greater portion of the month's rainfall occurred during the first six days. During the remainder of the month only light, scattered rains occurred. This was the fifth consecutive wet month. Light to moderately heavy hail was reported from scattered districts on the 20th, 21st, and 22d. Dense fogs prevailed frequently during the month. At the close of the month corn was mostly in shock and husking was somewhat general. A large yield of potatoes was secured and late apples were plentiful. Plowing and fall seeding progressed rapidly, and pastures and meadows were in good condition. Freezing temperatures at the close of the month caused much damage to late corn and gardens.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 65.0°, or 1.5° below the normal. The weather was nearly continuously cool from the 1st to the 14th, and unusually low temperatures prevailed from the 28th to the 30th, with the lowest readings on the morning of the 30th. The temperature was above the normal from the 17th to the 27th, the highest temperature being noted from the 17th to the 19th. The highest monthly mean was 69.6° at Huntington, and the lowest, 58.7° at Bayard. The highest temperature was 94° at Huntington on the 17th, and the lowest, 22° at Alpena on the 30th, making the monthly range for the State 72°. The greatest daily range was 51° at Lost Creek on the 24th.

PRECIPITATION

The average precipitation for the State, determined from 88 stations, was 3.30 inches, which was 0.36 inch more than the normal. Precipitation occurred frequently during the first decade, and on the 20th, 22d, and 28th, the greatest amounts being measured on the 2d, 3d, and 4th. The precipitation was the heaviest in the eastern and central counties, and lightest in the southern section. The greatest monthly precipitation was 6.25 inches at West Milford, and the least, 1.05 inches at Sharples. The greatest amount in any 24 consecutive hours was 3.25 inches at West Milford on the 3d. The average number of days with .01 inch or more of precipitation was 8.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Hail: 20th, 1 (Brownsville); 21st, 1 (Grafton); 22d, 3 (Dam 20, Ohio River, Pickens, and Spencer).

MISCELLANEOUS PHENOMENA (Continued)

Fogs, dense: 1st, 2; 3d, 1; 4th, 1; 5th, 2; 7th, 10; 8th, 11; 9th, 13; 10th, 12; 11th, 18; 12th, 14; 13th, 14; 14th, 9; 15th, 2; 16th, 11; 17th, 5; 18th, 6; 19th, 9; 20th, 5; 21st, 6; 22d, 4; 23d, 10; 24th, 8; 25th, 10; 26th, 5; 27th, 5; 28th, 3; 29th, 1; 30th, 3.

Thunderstorms: 2d, 1; 3d, 4; 4th, 1; 9th, 3; 18th, 1; 19th, 1; 20th, 14; 21st, 8; 22d, 7.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries
Reference letters, ^{a}, ^{b}, ^{c} appearing in the table indicate number of missing days; for example, ^{b} represents two days, etc.

Daily Precipitation for September, 1935

CLIMATOLOGICAL DATA

WEST VIRGINIA SECTION

R. P. POWELL

Vol. XLIII Parkersburg, W. Va., October, 1935 No. 10

GENERAL SUMMARY

October was a very pleasant month throughout West Virginia. The temperature and rainfall averaged slightly above the normal. The first decade was cold with the lowest temperatures for the month occurring at most stations on the 6th or 7th. The remainder of the month, except for a few days, was unusually warm, the highest temperatures being recorded generally on the 13th and 14th. The precipitation was favorably distributed throughout the month and over the State. The greatest monthly amounts were received over the central and mountain districts, and the least in scattered localities of the southern and northern Ohio River counties. The first snow of the season occurred at most stations on the 6th, the amounts ranging from a trace to 6.5 inches. Dense fog occurred frequently. Light hail was reported from scattered localities on the 11th. The weather during most of the month was favorable for outdoor work, and plowing and seeding progressed rapidly. Corn husking made good progress, and potato digging and threshing were completed. Pastures were in fair to good condition. The freezing temperatures during the first week caused very little damage, as all crops had matured.

TEMPERATURE

The monthly mean for the State, determined from 53 stations, was 54.7°, or 0.1° above the normal. Temperatures were continuously below the normal from the 1st to the 10th, and from the 24th to the 26th, with the lowest readings on the 6th and 7th. The temperature averaged much above the normal during the second decade, and from the 27th to the close of the month, with the highest temperatures occurring generally on the 13th and 14th. The highest monthly mean was 59.3° at Huntington and the lowest, 49.7° at Alpena. The highest temperature was 90° at Ryan on the 14th, and the lowest, 15° at Alpena on the 7th, making the monthly range for the State 75°. The greatest daily range was 56° at Cairo on the 15th.

PRECIPITATION

The average precipitation for the State, determined from 87 stations, was 3.01 inches, which was 0.23 inch above the normal. The greater portion of the rainfall was received on the 1st-2d, 6th, 11-12th, 22-23d, and 29th, the greatest amounts being recorded on the 12th, 22-23d, and 29th. The greatest monthly precipitation was 4.75 inches at Pickens, and the least, 1.25 inches at White Sulphur Springs. The average snowfall for the State, 0.2 inch, was 0.1 inch below the normal. The greatest monthly snowfall was 6.5 inches at Davis. The greatest amount of precipitation in any 24-consecutive hours was 1.80 inches at Hinton on the 28-29th. The average number of days with .01 inch or more of precipitation was 9.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Hail, light: 11th, 2 (Glenville and Reedsville).

Halo, lunar: 12th, 1 (Crawford).

MISCELLANEOUS PHENOMENA (Continued)

Fogs, dense: 1st, 2; 2d, 16; 3d, 3; 4th, 7; 5th, 13; 6th, 4; 7th, 12; 8th, 3; 9th, 13; 10th, 12; 11th, 1; 12th, 6; 13th, 19; 14th, 14; 15th, 4; 16th, 4; 17th, 5; 18th, 2; 19th, 5; 20th, 3; 21st, 2; 24th, 3; 25th, 14; 26th, 9; 27th, 2; 28th, 2; 30th, 5; 31st, 17.

Thunderstorms: 1st, 3; 11th, 7; 12th, 10; 15th, 3; 18th, 1; 20th, 5; 21st, 2; 22d, 5; 23d, 4.

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for October, 1935

Vol. XLIII Parkersburg, W. Va., November, 1935 No. 11

GENERAL SUMMARY

November was much warmer and slightly wetter than usual, with a large number of cloudy days. The month was characterized by long periods of moderately warm weather. The highest and lowest temperatures were within previous November records. The coldest weather prevailed in most sections during the middle of the last decade, with temperature readings ranging generally from 2° to 8° above zero in the mountain districts. The precipitation was fairly well distributed, although the monthly amounts were much deficient in the northern Ohio River counties and central districts. A general rain storm prevailed over the State on the 12-13th and amounts of an inch or more were received at a number of stations. The snowfall was light and unimportant in nearly all the agricultural sections, but moderate snow fell on two or three days in the mountain counties. The weather during most of the month was favorable for out-door work, and corn husking progressed rapidly. At the close of the month winter grains were in fair to good condition; corn was mostly cribbed, and pastures and meadows were green in many districts. A slight earthquake shock was felt over most of the State on the 1st at about 1:10 a.m.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 46.0°, or 2.8° above the normal. Temperatures were nearly continuously above the normal from the 1st to the 13th, and from the 26th to the 28th, with the highest temperatures occurring generally on the 1st, 4th, and 5th. Moderately cold weather prevailed during the second decade, 22d to the 25th, and on the 29th and 30th, the lowest readings being noted on the 24th and 25th. The highest monthly mean temperature was 51.0° at Charleston, and the lowest, 40.9° at Terra Alta. The highest temperature was 88° at McNeill on the 5th, and the lowest was 2° at Brandywine on the 24th, making the monthly range for the State, 86°.

PRECIPITATION

The average precipitation for the State, determined from 90 stations, was 2.80 inches, which was 0.03 inch more than the normal. The precipitation was the heaviest over the northeastern counties and mountain districts, and lightest in the northern Ohio River counties and central sections. Precipitation was general from the 6th to the 13th, 16th to the 23d, and on the 28th and 29th. The greatest amounts being measured on the 7th, 12-13th. The greatest monthly precipitation was 5.33 inches at Pickens, and the least, 0.65 inch at Morgantown. The greatest amount of precipitation in any 24 consecutive hours was 2.00 inches at White Sulphur Springs on the 12th. The average snowfall for the State, 1.1 inches, was 1.1 inches below the normal. The greatest monthly snowfall was 9.0 inches at Davis. The average number of days with .01 inch or more of precipitation, was 12.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Fogs, dense: 1st, 5; 2d, 2; 3d, 7; 4th, 1; 6th, 3; 8th, 5; 9th, 11; 11th, 5; 12th, 3; 13th, 5; 14th, 7; 15th, 8; 16th, 5; 17th, 3; 18th, 1; 19th, 1; 21st, 6; 22d, 2; 25th, 1; 28th, 1.

Sleet: 17th, 1 (Martinsburg).

Thunderstorms: 13th, 1 (Martinsburg).

The departures from normal temperature and precipitation are computed only for such stations as have ten or more years of record, but all complete reports are used in determining section means. † Also on other dates. †† Received too late to be included in means and summaries

Reference letters, [a], [b], [c] appearing in the table indicate number of missing days; for example, [b] represents two days, etc.

Daily Precipitation for November, 1935

WEST VIRGINIA SECTION

R. P. POWELL

VOL. XLIII PARKERSBURG, W. VA., DECEMBER, 1935 No. 12

GENERAL SUMMARY

This was the coldest December since 1917, and the third coldest of December State record. Temperatures were continuously below the normal from the 17th to the close of the month, with readings of zero or much below on several days. A low temperature of 20° below zero occurred on the morning of the 31st at Ryan. During the afternoon and evening of the 25th, a severe blizzard, following a windshift line, prevailed over the State, attended by high winds, zero temperatures, and heavy snowfall. The precipitation averaged somewhat above the normal and was well distributed throughout the month and over the State. Snow occurred frequently during the last half of the month, with heavy amounts in some of the mountain counties. The average monthly snowfall, 20.5 inches, was the greatest of December State record. Navigable streams over the State were closed to navigation during the cold periods by being frozen or full of heavy floating ice. During the cold weather, winter grains were well protected by snow cover and at the close of the month were mostly in good condition. Little outdoor work was accomplished. Thunderstorms occurred generally in the central counties on the 15th.

TEMPERATURE

The monthly mean for the State, determined from 54 stations, was 27.5°, or 7.1° below the normal. Warm weather for the season prevailed from the 6th to the 10th, 14th and 15th, and 18th, with the highest readings occurring generally on the 7th and 9th. Temperatures were below the normal from the 1st to the 5th, and during the last half of the month, the lowest temperatures being noted on the 22d and 31st. The highest monthly mean was 32.2° at Charleston, and the lowest, 22.2° at Alpena. The highest temperature was 62° at Hastings on the 7th, and the lowest, 20° below zero at Ryan on the 31st, making the monthly range for the State 82°. The greatest daily range was 51° at Ryan on the 31st.

PRECIPITATION

The average precipitation for the State, determined from 89 stations, was 3.66 inches, which was 0.32 inch more than the normal. The precipitation was the greatest over the mountain districts, and least in the northeastern panhandle counties. The greater portion of the precipitation was received on the 8-9th, 12-15th, and 20-30th, the precipitation being heavy in most districts on the 13th. Snow was general on the 1st-2d, and from the 15th to the close of the month, with the greatest amounts on the 20th and 30th. The greatest monthly precipitation was 8.74 inches at Pickens, and the least, 1.40 inches at Brandywine. The greatest amount in any 24 consecutive hours was 1.97 inches at Pickens. The average monthly snowfall, 20.5 inches, was 14.5 inches more than the normal. The greatest monthly snowfall was 66.0 inches at Pickens. The average number of days with .01 inch or more of precipitation was 17.

MISCELLANEOUS PHENOMENA

(Dates and number of stations reporting)

Fogs, dense: 1st, 1; 10th, 1; 13th, 3; 14th, 4; 15th, 2; 24th, 1; 27th, 1; 31st, 1.

Hail, light: 15th, 2 (Aberdeen and Lost Creek).

Halo, lunar: 12th, 1 (Parkersburg).

Sleet: 2d, 1 (Martinsburg); 13th, 1 (Elkins); 14th, 1 (Martinsburg); 15th, 2 (Elkins and Parsons); 16th, 1 (Charleston).

Thunderstorm: 15th, 12.
